**NEW QUESTION: 1**Where does a switch maintain DHCP snooping information?**A.** in the MAC address table**B.** in the DHCP binding database**C.** in the CAM table**D.** in the VLAN database  
**Answer: B**Explanation:Explanation/Reference:Explanation:

**NEW QUESTION: 2**A group of report writers develop reports. The report writers currently use Report Builder 1.0 and report models. The report writers are not trained on SQL Server query writing. Their report assignments come from various departments within the organization. The company is upgrading to SQL Server 2012 with SQL Server Reporting Services (SSRS) in native mode. After the upgrade, reports will retrieve data from a large new data warehouse that will reside on an instance of the SQL Server 2012 Database Engine. Reports for each department will retrieve data from only a subset of the data warehouse tables. You are designing the data access strategy. You have the following requirements: - Ensure that report writers can create only reports that display data which they have database permissions to view. - Minimize the effort required to update connection strings for all reports developed by the report writers. - Minimize the number of fields visible in a specific report for report writers who work for multiple departments. You need to design the data access strategy. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)**A.** Create one shared data source that uses integrated security. Create one shared dataset that includes all tables required by the report writers.**B.** Create one shared data source that uses integrated security. Create a shared dataset for each department's data requirements.**C.** Create one shared data source that uses integrated security. Create an embedded dataset for each report.**D.** Create report models by using SQL Server Data Tools (SSDT). Include data sources and data source views for each department's data requirements. Configure each data source to use integrated security.**Answer: B**

**NEW QUESTION: 3**You create an experiment in Azure Machine Learning Studio- You add a training dataset that contains 10,000 rows. The first 9,000 rows represent class 0 (90 percent). The first 1,000 rows represent class 1 (10 percent). The training set is unbalanced between two classes. You must increase the number of training examples for class 1 to 4,000 by using data rows. You add the Synthetic Minority Oversampling Technique (SMOTE) module to the experiment. You need to configure the module. Which values should you use? To answer, select the appropriate options in the dialog box in the answer area. NOTE: Each correct selection is worth one point.**Answer:** Explanation:
