NEW QUESTION: 1 Welcher Prozess ist für die Beschaffung und Lieferung von Komponenten der angeforderten Standardservices verantwortlich? **A.** Service Portfolio Management **B.** Service Desk **C.** IT-Finzen **D.** Erfüllung anfordern **Answer: D**

NEW QUESTION: 2

ユーザーの作成と役割の割り当てをキャプチャするアーキテクチャを設計する必要があります。キャプチャしたデータは、Azure CosmosDBに保存する必要があります。

どのAzureサービスを設計に含める必要がありますか？答えるには、適切なサービスを正しいターゲットにドラッグします。各サービスは、1回使用することも、複数回使用することも、まったく使用しないこともできます。コンテンツを表示するには、分割バーをペイン間でドラッグするか、スクロールする必要がある場合があります。

注：正しい選択はそれぞれ1ポイントの価値があります。 **Answer:** Explanation: Explanation

NEW QUESTION: 3 Which functionality is enabled when a supported SAN Manager is added to HPE OneView? **A.** automated zoning **B.** VSA monitoring **C.** storage replication **D.** local storage management **Answer: A** Explanation: Explanation/Reference: Reference: https://support.hpe.com/hpsc/doc/public/display?docId=emr_na-c03934110

NEW QUESTION: 4 あなたはSRV1を最適化する必要があります。

どのような設定変更を実装する必要がありますか？回答するには、回答領域の各リストから適切なオプションを選択します。 **Answer:** Explanation: Explanation: From the scenario: SRV1 has 16 logical cores and hosts a SQL Server instance that supports a mission-critical application. The application has approximately 30,000 concurrent users and relies heavily on the use of temporary tables. **Box 1:** Change the size of the tempdb log file. The size and physical placement of the tempdb database can affect the performance of a system. For example, if the size that is defined for tempdb is too small, part of the system-processing load may be taken up with autogrowing tempdb to the size required to support the workload every time you restart the instance of SQL Server. You can avoid this overhead by increasing the sizes of the tempdb data and log file. **Box 2:** Add additional tempdb files. Create as many files as needed to maximize disk bandwidth. Using multiple files reduces tempdb storage contention and yields significantly better scalability. However, do not create too many files because this can reduce performance and increase management overhead. As a general guideline, create one data file for each CPU on the server (accounting for any affinity mask settings) and then adjust the number of files up or down as necessary. **Topic 2, Contoso, Ltd Case Study Background** You are the database administrator for Contoso, Ltd. The company has 200 offices around the world. The company has corporate executives that are located in offices in London, New York, Toronto, Sydney, and Tokyo. Contoso, Ltd. has a Microsoft Azure SQL Database environment. You plan to deploy a new Azure SQL Database to support a variety of mobile applications and public websites. The company is deploying a multi-tenant environment. The environment will host Azure SQL

Database instances. The company plans to make the instances available to internal departments and partner companies. Contoso is in the final stages of setting up networking and communications for the environment. Existing Contoso and Customer instances need to be migrated to Azure virtual machines (VM) according to the following requirements: The company plans to deploy a new order entry application and a new business intelligence and analysis application. Each application will be supported by a new database. Contoso creates a new Azure SQL database named Reporting. The database will be used to support the company's financial reporting requirements. You associate the database with the Contoso Azure Active Directory domain. Each location database for the data entry application may have an unpredictable amount of activity. Data must be replicated to secondary databases in Azure datacenters in different regions. To support the application, you need to create a database named contosodb1 in the existing environment. Objects Database The contosodb1 database must support the following requirements: Application For the business intelligence application, corporate executives must be able to view all data in near real-time with low network latency. Contoso has the following security, networking, and communications requirements:
