**NEW QUESTION: 1****SIMULATION****Answer:** Explanation:Here are the solution as below:

Explanation:First we have to figure out why R3 and R4 can not communicate with each other. Use the show running-config command on router R3. Notice that R3 is configured as a stub receive-only router. The receive-only keyword will restrict the router from sharing any of its routes with any other router in that EIGRP autonomous system. This keyword will also prevent any type of route from being sent. Therefore we will remove this command and replace it with the eigrp stub command:R3# configure terminal R3(config)# router eigrp 123 R3(config-router)# no eigrp stub receive-only R3(config-router)# eigrp stubR3(config-router)# endNow R3 will send updates containing its connected and summary routes to other routers. Notice that the eigrp stub command equals to the eigrp stub connected summary because the connected and summary options are enabled by default.Next we will configure router R3 so that it has only 2 subnets of 10.0.0.0 network. Use the show ip route command on R3 to view its routing table: Because we want the routing table of R3 only have 2 subnets so we have to summary sub-networks at the interface which is connected with R3, the s0/0 interface of R4. There is one interesting thing about the output of the show ip route shown above: the 10.2.3.0/24, which is a directly connected network of R3. We can't get rid of it in the routing table no matter what technique we use to summary the networks. Therefore, to make the routing table of R3 has only 2 subnets we have to summary other subnets into one subnet. In the output if we don't see the summary line (like 10.0.0.0/8 is a summary...) then we should use the command ip summary-address eigrp 123 10.2.0.0 255.255.0.0 so that all the ping can work well. In conclusion, we will use the ip summary-address eigrp 123 10.2.0.0 255.255.0.0 at the interface s0/0 of R4 to summary. R4> enable R4# conf tR4(config)# interface s0/0 R4(config-if)# ip summary-address eigrp 123 10.2.0.0 255.255.0.0Now we jump back to R3 and use the show ip route command to verify the effect, the output is shown below: Note: Please notice that the IP addresses and the subnet masks in your real exam might be different so you might use different ones to solve this question. Just for your information, notice that if you use another network than 10.0.0.0/8 to summary, for example, if you use the command ip summary-address eigrp 123 10.2.0.0 255.255.0.0 you will leave a /16 network in the output of the show ip route command. But in your real exam, if you don't see the line "10.0.0.0/8 is a summary, Null0" then you can summarize using the network 10.2.0.0/16. This summarization is better because all the pings can work well. Finally don't forget to use the copy run start command on routers R3 and R4 to save the configurations. R3(config-if)# endR3# copy run startR4(config-if)# endR4# copy run startIf the "copy run start" command doesn't work then use "write memory."

**NEW QUESTION: 2**Your company deploys Microsoft Lync Online. You deploy the Microsoft Lync 2010 client to all client computers. All users log on to the local domain. You need to prevent users from modifying the Advanced Connection Settings on the Lync 2010 client. What should

you do?**A.** From the Lync Server Management Shell, run the Set-CsClientPolicy cmdlet.**B.** Deploy a Group Policy object (GPO) that removes all of the members of the local Administrators group.**C.** Deploy a Group Policy object (GPO) that uses the Communicator.adm administrative template.**D.** From the Lync Server Management Shell, run the Set-CsUserServicesConfiguration cmdlet.**Answer: C**  
**Explanation:**Explanation/Reference:Explanation:A group policy object (GPO) is used to configure client and server settings in an Active Directory domain.For client computer settings, the settings are applied when the computer starts up.By installing Communicator.adm administrative template, you will add Lync specific client settings to a group policy. This will enable you to configure Lync client settings and deploy the settings to all client computers that run the Lync Client software. By configuring the Advanced Connection Settings using a group policy object, you will prevent the users from modifying the settings.
