Nothing can divert your attention, [IIA-CIA-Part2 Exam Score](#) If you fail in the exam, we will refund you immediately.

NEW QUESTION: 1 A Solutions Architect is designing a system that will collect and store data from 2,000 internet-connected sensors. Each sensor produces 1 KB of data every second. The data must be available for analysis within a few seconds of it being sent to the system and stored for analysis indefinitely. Which is the MOST cost-effective solution for collecting and storing the data?
A. Put each record into an object in Amazon S3 with a prefix that organizes the records by hour and hashes the record's key. Use S3 lifecycle management to transition objects to S3 infrequent access storage to reduce storage costs. Analyze recent and historical data by accessing the data in Amazon S3.
B. Put each record in Amazon Kinesis Data Streams. Set up Amazon Kinesis Data Firehose to read records from the stream and group them into objects in Amazon S3. Analyze recent data from Kinesis Data Streams and historical data from Amazon S3.
C. Put each record in Amazon Kinesis Data Streams. Use an AWS Lambda function to write each record to an object in Amazon S3 with a prefix that organizes the records by hour and hashes the record's key. Analyze recent data from Kinesis Data Streams and historical data from Amazon S3.
D. Put each record into an Amazon DynamoDB table. Analyze the recent data by querying the table. Use an AWS Lambda function connected to a DynamoDB stream to group records together, write them into objects in Amazon S3, and then delete the record from the DynamoDB table. Analyze recent data from the DynamoDB table and historical data from Amazon S3.
Answer: B
Explanation: The key point is that the data must be available for analysis within a few seconds of it being sent to the system. A is good but limited with Lambda function (2000) B is an answer, offload the write to S3 by stream group, able to analyze directly from stream. C is too slow D is too cost (for lots of puts request to S3)

NEW QUESTION: 2 A company has a requirement to pay small suppliers outside of Payables, but it does not want to manually record each payment. Which solution should you implement?
A. Create payments by using a clearing payment method for those suppliers because this payment method does not generate a file.
B. Create payments by using Electronic Funds Transfer (EFT) for those suppliers but do not send the electronic file to the bank.
C. Create payments by using the Check Payment method for those suppliers and then destroy those checks.
D. Create a payment by using a wire payment method for those suppliers.
Answer: D
Explanation: Explanation When you create a payment outside of Payables, for example, using a typed check or wire transfer, within Payables you can record the payment and update the invoices that you paid.

NEW QUESTION: 3 Hinweis: Diese Frage ist Teil einer Reihe von Fragen, die dasselbe Szenario darstellen. Jede Frage in der Reihe enthält eine einzigartige Lösung, die die angegebenen Ziele erreichen kann. Einige Fragensätze haben möglicherweise mehr als eine richtige Lösung, während andere möglicherweise keine richtige Lösung haben. Nachdem Sie eine Frage in

diesem Abschnitt beantwortet haben, können Sie NICHT mehr darauf zurückkommen. Infolgedessen werden diese Fragen nicht im Überprüfungs Bildschirm angezeigt. Sie planen, mehrere virtuelle Azure-Maschinen bereitzustellen. Sie müssen sicherstellen, dass die auf den virtuellen Maschinen ausgeführten Dienste verfügbar sind, wenn ein einzelnes Rechenzentrum ausfällt. Lösung: Sie stellen die virtuellen Maschinen für zwei oder mehr Ressourcengruppen bereit. Erfüllt dies das Ziel? **A. Nein B. Ja** **Answer: A** Explanation: Explanation A resource group is a logical container for Azure resources. When you create a resource group, you specify which location to create the resource group in. However, when you create a virtual machine and place it in the resource group, the virtual machine can still be in a different location (different datacenter). Therefore, creating multiple resource groups, even if they are in separate datacenters does not ensure that the services running on the virtual machines are available if a single data center fails.
