dig host.company.com**F.** パスワードクラッカー**G.** Nmap
Answer: B,C,G
Explanation: Banner grabbing and operating system identification can also be defined as fingerprinting the TCP/IP stack. Banner grabbing is the process of opening a connection and reading the banner or response sent by the application. The output displayed in option F includes information commonly examined to fingerprint the OS. Nmap provides features that include host discovery, as well as service and operating system detection. Incorrect Answers: B: A password cracker is used to recover passwords from data that have been stored in or transmitted by a computer system. C: This answer is invalid as port 443 is used for HTTPS, not HTTP. D: This web address link will not identify unsupported operating systems for the purpose of disconnecting them from the network. E: The dig (domain information proper) command is a network administration command-line tool for querying Domain Name System (DNS) name servers.
