Explanation:When you attach a policy to a user or group of users to control access to your load balancer, it allows or denies the users permission to perform the specified tasks on the specified resources.An IAM policy is a JSON document that consists of one or more statements. Each statement is structured as follows:Effect: The effect can be Allow or Deny. By default, IAM users don't have permission to use resources and API actions, so all requests are denied. An explicit allow overrides the default. An explicit deny overrides any allows.Action: The action is the specific API action for which you are granting or denying permission.Resource: The resource that's affected by the action. With many Elastic Load Balancing API actions, you can restrict the permissions granted or denied to a specific load balancer by specifying its Amazon Resource Name (ARN) in this statement. Otherwise, you can use the * wildcard to specify all of your load balancers.Condition: You can optionally use conditions to control when your policy is in effect.Reference:
