NEW QUESTION: 4 Which of the following term in business continuity defines the total amount of time that a business process can be disrupted without causing any unacceptable consequences? **A.** WRT **B.** MTDC **C.** RTOD **D.** RPO **Answer: B** Explanation: Explanation/Reference: The

sum of RTO and WRT is defined as the Maximum Tolerable Downtime (MTD) which defines the total amount of time that a business process can be disrupted without causing any unacceptable consequences. This value should be defined by the business management team or someone like CTO, CIO or IT manager. For your exam you should know below information about RPO, RTO, WRT and MTD:

Stage 1: Business as usual
Image Reference - <http://defaultreasoning.files.wordpress.com/2013/12/bcdr-01.png> At this stage all systems are running production and working correctly.

Stage 2: Disaster occurs
Image Reference - <http://defaultreasoning.files.wordpress.com/2013/12/bcdr-02.png> On a given point in time, disaster occurs and systems need to be recovered. At this point the Recovery Point Objective (RPO) determines the maximum acceptable amount of data loss measured in time. For example, the maximum tolerable data loss is 15 minutes.

Stage 3: Recovery
Image Reference - <http://defaultreasoning.files.wordpress.com/2013/12/bcdr-03.png> At this stage the system are recovered and back online but not ready for production yet. The Recovery Time Objective (RTO) determines the maximum tolerable amount of time needed to bring all critical systems back online. This covers, for example, restore data from back-up or fix of a failure. In most cases this part is carried out by system administrator, network administrator, storage administrator etc.

Stage 4: Resume Production
Image Reference - <http://defaultreasoning.files.wordpress.com/2013/12/bcdr-04.png> At this stage all systems are recovered, integrity of the system or data is verified and all critical systems can resume normal operations. The Work Recovery Time (WRT) determines the maximum tolerable amount of time that is needed to verify the system and/or data integrity. This could be, for example, checking the databases and logs, making sure the applications or services are running and are available. In most cases those tasks are performed by application administrator, database administrator etc. When all systems affected by the disaster are verified and/or recovered, the environment is ready to resume the production again.

MTD
Image Reference - <http://defaultreasoning.files.wordpress.com/2013/12/bcdr-05.png> The sum of RTO and WRT is defined as the Maximum Tolerable Downtime (MTD) which defines the total amount of time that a business process can be disrupted without causing any unacceptable consequences. This value should be defined by the business management team or someone like CTO, CIO or IT manager.

The following answers are incorrect:

RPO - Recovery Point Objective (RPO) determines the maximum acceptable amount of data loss measured in time. For example, the maximum tolerable data loss is 15 minutes.

RTO - The Recovery Time Objective (RTO) determines the maximum tolerable amount of time needed to bring all critical systems back online. This covers, for example, restore data from back-up or fix of a failure. In most cases this part is carried out by system administrator, network administrator, storage administrator etc.

WRT - The Work Recovery Time (WRT) determines the maximum tolerable amount of time that is needed to verify the system and/or data integrity. This could be, for example, checking the databases and logs, making sure the applications or services are running and are available. In most cases those tasks are performed by application administrator, database administrator etc. When all systems affected by the disaster are verified and/or recovered, the environment is ready to resume the production again.
