When the AS numbers among routers are mismatched, no adjacency is formed.(You should check the AS numbers on other routers for sure)To solve this problem, we

simply re-configure router ENG router with the following commands:ENG# conf tENG(config)# no router eigrp 22ENG(config)# router eigrp 12ENG(config-router)# network 192.168.60.0 ENG(config-router)# network 192.168.77.0ENG(config-router)# no auto-summary ENG(config-router)# endENG# copy running-config startup-config

Second we should check the configuration of the MGT Router. Click the console PC "G" and enter the following commands. MGT> enablePassword: ciscoMGT# show running-config

Building configuration...Current configuration : 1029 bytes!  
 version 12.2

MGT# Notice that it is missing a definition to the network ENG. Therefore we have to add it so that it can recognize ENG router MGT# conf t MGT(config)# router eigrp 12 MGT(config-router)# network 192.168.77.0 MGT(config-router)# end MGT# copy running-config startup-config

Now the whole network will work well. You should check again with ping command from router ENG to other routers!

In Short:ENG Router ENG>enablePassword: cisco ENG# conf tENG(config)# no router eigrp 22ENG(config)# router eigrp 12ENG(config-router)# network 192.168.60.0ENG(config-router)# network 192.168.77.0 ENG(config-router)# no auto-summaryENG(config-router)# endENG# copy running-config startup-config

MGT RouterMGT>enablePassword: cisco MGT# conf tMGT(config)# router eigrp 12MGT(config-router)# network 192.168.77.0MGT(config-router)# endMGT# copy running-config startup-config

Some Modification in Question

After adding ENG router, no routing updates are being exchanged between MGT and the new location. All other inter connectivity for the existing locations of the company are working properly. But Internet connection for existing location including Remote1 and Remote2 networks are not working.

Faults Identified:1. Incorrect Autonomous System Number configured in ENG router.2. MGT router does not advertise route to the new router ENG.3. Internet Connection is not working all stations.

We need to correct the above two configuration mistakes to have full connectivity

Steps:1. ENG Router: Change the Autonomous System Number of ENG2. Perimeter Router: Add the network address of interface of Perimeter that link between MGT and ENG.3. Perimeter Router: Add default route and default-network.

Check the IP Address of S1/0 interface of MGT Router using show running-config command. (The interface used to connect to the ISP)! interface Serial1/0 ip address 198.0.18.6 255.255.255.252!

For Internet sharing we have create a default route, and add default-network configuration. The IP address is 198.0.18.6/30. Then the next hop IP will be 198.0.18.5.

ENG RouterENG>enablePassword: cisco ENG# conf tENG(config)# no router eigrp 22ENG(config)# router eigrp 12ENG(config-router)# network 192.168.60.0 ENG(config-router)# network 192.168.77.0ENG(config-router)# no auto-summary ENG(config-router)# endENG# copy running-config startup-config

MGT RouterMGT>enable Password: cisco MGT# conf tMGT(config)# router eigrp 12MGT(config-router)# network 192.168.77.0MGT(config-router)# exitMGT(config)# ip route 0.0.0.0 0.0.0.0 198.0.18.5 MGT(config)# ip default-network 198.0.18.0MGT(config)# exitMGT# copy running-config startup-config

Important:If you refer the topology and IP chart, the MGT router uses Fa0/0 to connect ENG router, S0/0 used to connect Remote1, and S0/1 used to connect Remote2. Refer to the command show running-config, the command #PASSIVE-INTERFACE <Interface Name> will deny EIGRP updates to specified interface. In that case we need to use #no passive-interface <Interface Name> to allow the routing updates to be passed to that interface. For example when used the #show run command and we see the output like below.!

```
router eigrp 22
network 192.168.77.0
network 192.168.60.0
passive-interface FastEthernet 0/0
passive-interface Serial 1/0
no auto-summary!
```

Then the command would be MGT(config)#router eigrp 12

MGT(config-router)#no passive-interface Fa0/0MGT(config-router)#endAlso MGT router connect to the ISP router using Serial 1/0. If you seen passive-interface s1/0, then do not remove it using #no passive-interface s1/0 command.
