You can avail these practice questions in pdf dumps and can use them on any device, How to pass the CIS-SPM exam easily, You can download it and use it with any PDF player.

NEW QUESTION: 1 After submitting a Terminate request for rating, you observe the following error:Status for operationType TERMINATE on SessionID 20151125050923 is FAILURE(NO_QUALIFIED_CHARGE_OFFERS, ZERO_RUM_QUANTITY)Identify the reason for the error message.**A.** The subscriber exists but the charge offer is not active at the time specified in the event.**B.** The subscriber does not exist in Billing and Revenue Management (BRM).**C.** The Customer Updater node is down.**D.** The subscriber exists in BRM but has not been synchronized to Elastic Charging Engine(ECE).**Answer: A**

NEW QUESTION: 2A. Option C**B.** Option B**C.** Option E**D.** Option D**E.** Option A**Answer: A,D**

NEW QUESTION: 3 Three companies want to allow their employees to seamlessly connect to each other's wireless corporate networks while keeping one consistent wireless client configuration. Each company wants to maintain its own authentication infrastructure and wants to ensure that an employee who is visiting the other two companies is authenticated by the home office when connecting to the other companies' wireless network.All three companies have agreed to standardize on 802.1x EAP-PEAPMSCHAPv2 for client configuration. Which of the following should the three companies implement?**A.** The three companies should implement a central portal-based single sign-on and agree to use the same CA when issuing client certificates.**B.** All three companies should use the same wireless vendor to facilitate the use of a shared cloud based wireless controller.**C.** The three companies should implement federated authentication through Shibboleth connected to anLDAP backend and agree on a single SSID.**D.** The three companies should agree on a single SSID and configure a hierarchical RADIUS system which implements trust delegation.**Answer: D**Explanation:To enable "employees to seamlessly connect to each other's wireless corporate networks while keeping one consistent wireless client configuration", the wireless networks must all use the same SSID. We should use RADIUS (Remote Authentication Dial-In User Service). RADIUS is a protocol that was originally used to authenticate users over dialup connections, but is increasingly used for other authentication scenarios, including the wireless network.A RADIUS hierarchy with delegated trust will enable a user connecting to one company wireless network(not his home company network) to be authenticated by the RADIUS server in his home network. For example: if a user from Company A connects to the wireless network in Company C, the Company CRADIUS server will see that the user is not from Company A and forward the authentication request to theRADIUS server in Company A.Incorrect Answers:B: The question states that "an employee who is visiting the other two companies is authenticated by the home office when connecting to the other companies' wireless network". This will not happen with

federated authentication.C: The question states that the "companies want to allow their employees to seamlessly connect to each other's wireless corporate networks while keeping one consistent wireless client configuration".This will not happen seamlessly with a central portal-based single sign-on. Authentication by the home office also will not happen with this solution.D: A cloud-based solution will not enable authentication by the home office. References:http://www.eduroam.be/node/13

NEW QUESTION: 4 Two routers are trying to establish an OSPFv3 adjacency over an Ethernet link, but the adjacency is not forming.Which two options are possible reasons that prevent OSPFv3 to form between these two routers? (Choose two.)**A.** mismatch of subnet masks**B.** mismatch of authentication types**C.** mismatch of area types**D.** mismatch of instance IDs**E.** mismatch of network types**Answer: C,D**Explanation:An OSPFv3 interface must have a compatible configuration with a remote interface before the two can be consideredneighbors. The two OSPFv3 interfaces must match the following criteria:* Hello interval* Dead interval* Area ID* Optional capabilitiesThe OSPFv3 header includes an instance ID field to identify that OSPFv3 packet for a particular OSPFv3 instance. Youcan assign the OSPFv3 instance. The interface drops all OSPFv3 packets that do not have a matching OSPFv3 instanceID in the packet header.Reference: http://www.cisco.com/c/en/us/td/docs/switches/datacenter/sw/5_x/nx-os/unicast/configuration/guide/l3_cli_nxos/l3_ospfv3.html
