**NEW QUESTION: 1**Office Documents (Word, Excel and PowerPoint) contain a code that allows tracking the MAC or unique identifier of the machine that created the document. What is that code called?**A.** Personal Application Protocol**B.** Individual ASCII string**C.** Globally unique ID**D.** Microsoft Virtual Machine Identifier**Answer: C**

**NEW QUESTION: 2**In which of the following business organisations do the members have limited liability and the ability to keep the constitution private?**A.** A limited liability partnership **B.** A sole trader**C.** A company limited by shares**D.** A general partnership**Answer: A**

**NEW QUESTION: 3**Which of the following produces this XY Graph?**A.** Option DB. Option BC. Option CD. Option A**Answer: B**

**NEW QUESTION: 4**A company has several conference rooms with wired network jacks that are used by both employees and guests. Employees need access to internal resources and guests only need access to the Internet. Which of the following combinations is BEST to meet the requirements?**A.** Switches and a firewall**B.** VPN and IPsec**C.** 802.1x and VLANs**D.** NAT and DMZ**Answer: C**  
Explanation:802.1x is a port-based authentication mechanism. It's based on Extensible Authentication Protocol (EAP) and is commonly used in closed-environment wireless networks. 802.1x was initially used to compensate for the weaknesses of Wired Equivalent Privacy (WEP), but today it's often used as a component in more complex authentication and connection-management systems, including Remote Authentication Dial-In User Service (RADIUS), Diameter, Cisco System's Terminal Access Controller Access-Control System Plus (TACACS+), and Network Access Control (NAC).A virtual local area network (VLAN) is a hardware-imposed network segmentation created by switches. By default, all ports on a switch are part of VLAN 1. But as the switch administrator changes the VLAN assignment on a port-by-port basis, various ports can be grouped together and be distinct from other VLAN port designations. VLANs are used for traffic management. Communications between ports within the same VLAN occur without hindrance, but communications between VLANs require a routing

function. Incorrect Answers: A. NAT converts the IP addresses of internal systems found in the header of network packets into public IP addresses. A demilitarized zone (DMZ) is an area of a network that is designed specifically for public users to access. B. A virtual private network (VPN) is a communication tunnel between two entities across an intermediary network. In most cases, the intermediary network is an untrusted network, such as the Internet, and therefore the communication tunnel is also encrypted. Internet Protocol Security (IPSec) is both a stand-alone VPN protocol and a module that can be used with L2TP. C. A switch is a networking device used to connect other devices together and potentially implement traffic management on their communications. Firewalls manage traffic using filters.
