**NEW QUESTION: 1**あなたの会社には10の部署があります。

同社はAzure環境の実装を計画しています。

各部門が消費するAzureサービスに対して、異なる部門が異なる支払いオプションを使用できるようにする必要があります。各部署に何を作成しますか。**A.** a reservation**B.** a resource group**C.** a container instance**D.** a subscription**Answer: D**  
**Explanation:**ExplanationThere are different payment options in Azure including pay-as-you-go (PAYG), Enterprise Agreement (EA), and Microsoft Customer Agreement (MCA) accounts.Your Azure costs are 'per subscription'. You are charged monthly for all resources in a subscription.Therefore, to use different payment options per department, you will need to create a separate subscription per department. You can create multiple subscriptions in a single Azure Active Directory tenant.

**NEW QUESTION: 2**An administrator wants deduplication clients in a remote office to perform backups so less data is sent over the wide area network (WAN).Which action should the administrator perform to reduce the total amount of data sent over the WAN?**A.** enable deduplication stream handlers for the clients.**B.** set client attributes to "Always use client-side deduplication".**C.** set the deduplication disk pool to "Limit I/O streams".**D.** set client attributes to "Always use the media server".**Answer: B**

**NEW QUESTION: 3****A.** Edition-Based Table Redefinition**B.** An ALTER TABLE MOVE to move the table and ALTER INDEX REBUILD to move the indexes.**C.** Oracle Data Pump**D.** Online Table Redefinition**E.** An ALTER TABLE MOVE to move the table and ALTER INDEX REBUILD ONLINE to move the indexes**Answer: D**  
**Explanation:**Explanation\* Oracle Database provides a mechanism to make table structure modifications without significantly affecting the availability of the table. The mechanism is called online table redefinition. Redefining tables online provides a substantial increase in availability compared to traditional methods of redefining tables.\* To redefine a table online:Choose the redefinition method: by key or by rowid\* By key-Select a primary key or pseudo-primary key to use for the redefinition. Pseudo-primary keys are unique keys with all component columns having NOT NULL constraints. For this method, the versions of the tables before and after redefinition should have the same primary key columns. This is the preferred and default method of redefinition.\* By rowid-Use this method if no key is available. In this method, a hidden column named M\_ROW\$\$ is added to the post-redefined

version of the table. It is recommended that this column be dropped or marked as unused after the redefinition is complete. If COMPATIBLE is set to 10.2.0 or higher, the final phase of redefinition automatically sets this column unused. You can then use the ALTER TABLE ... DROP UNUSED COLUMNS statement to drop it. You cannot use this method on index-organized tables. Note: \* When you rebuild an index, you use an existing index as the data source. Creating an index in this manner enables you to change storage characteristics or move to a new tablespace. Rebuilding an index based on an existing data source removes intra-block fragmentation. Compared to dropping the index and using the CREATE INDEX statement, re-creating an existing index offers better performance.
