Guaranteed Refund, Have you ever dreamed about passing the most important exam such as HP HPE7-A03 in your field with great ease, Candidates can choose different versions of HPE7-A03 VCE dumps based on personal learning habits and demands.

It will be good to you as you can make notes on it in case of the later review, Now take a look of them as follows, Whenever you have problems about our HPE7-A03 study materials, you can contact our online workers via email.

**NEW QUESTION: 1** Which of the following is the most reasonable explanation for a shortage of a product?  
**A.** The producers underestimated the demand for the product.  
**B.** The producers overestimated the demand for the product.  
**C.** The product has very few uses.  
**D.** Customer found the product overpriced.  
**E.** A rival company produced a cheaper version of the product.  
**Answer: A**  
Explanation: Explanation/Reference: Explanation: If the product were overpriced, overproduced, or had few uses, there would likely be a surplus of the product rather than a shortage.

**NEW QUESTION: 2** Which three statements are true about the initial storage configuration after the standard deployment of a new database Machine?  
**A.** There is free space available on the flashdisk inside the Exadata storage servers for possible use as flash-based griddisks.  
**B.** The Data\_<DBM\_Name> and RECO\_<DBM\_Name> ASM diskgroups are built on part of the interleaved griddisks.  
**C.** There is no free disk available on the flashdisk inside the Exadata storage servers for possible use as flash-based griddisks.  
**D.** There is a free space available on the hard disks inside the database servers for possible extension of the /u01 filesystem.  
**E.** The Data\_<DBM\_Name> and RECO\_<DBM\_Name> ASM diskgroups are built on top of the non-interleaved griddisks.  
**F.** There is no free disk space available on the hard disk inside the database servers for possible extensions of the /u01 file system.  
**Answer: C, D, E**  
Explanation: B (not A): Griddisks are the fourth layer of abstraction, and they will be the Candidate Disks to build your ASM diskgroups from. By default (interleaving=none on the Celldisk layer), the first Griddisk that is created upon a Celldisk is placed on the outer sectors of the underlying Harddisk. It will have the best performance therefore. If we follow the recommendations, we will create 3 Diskgroups upon our Griddisks: DATA, RECO and SYSTEMDG. Note: \* non-root partition (/u01). \* Oracle Database files: DATA disk group. \* Flashback log files, archived redo files, and backup files: RECO disk group.

**NEW QUESTION: 3** -- Exhibit - -- Exhibit - Referring to the exhibit, if all four switches in the Virtual Chassis boot at the same time, which of the members will assume the master and the backup Routing Engine roles?  
**A.** The configuration is missing a priority statement to make the determination.  
**B.** Member 0 and Member 2 will participate in an election process to determine the master and the backup.  
**C.** Member 2 will be the master and Member 0 will be the backup

based on the serial number. **D.** Member 0 will be the master and Member 2 will be the backup based on the serial number. **Answer: B**

**NEW QUESTION: 4** CORRECT TEXT A corporation wants to add security to its network. The requirements are: \*Host C should be able to use a web browser (HTTP) to access the Finance Web Server. \*Other types of access from host C to the Finance Web Server should be blocked. \*All access from hosts in the Core or local LAN to the Finance Web Server should be blocked. \*All hosts in the Core and on local LAN should be able to access the Public Web Server. You have been tasked to create and apply a numbered access list to a single outbound interface. This access list can contain no more than three statements that meet these requirements. Access to the router CLI can be gained by clicking on the appropriate host. \*All passwords have been temporarily set to "cisco". \*The Core connection uses an IP address of 198.18.209.65. \*The computers in the Hosts LAN have been assigned addresses of 192.168.78.1 -192.168.78.254. \* host A 192.168.78.1 \*host B 192.168.78.2 \*host C 192.168.78.3 \*host D 192.168.78.4 \*The Finance Web Server has been assigned an address of 172.22.146.17. \*The Public Web Server in the Server LAN has been assigned an address of 172.22.146.18. **Answer:** Explanation: Please see below explanation part for details answer steps: Explanation: We should create an access-list and apply it to the interface that is connected to the Server LAN because it can filter out traffic from both S2 and Core networks. To see which interface this is, use the "show ip int brief" command: From this, we know that the servers are located on the fa0/1 interface, so we will place our numbered access list here in the outbound direction. Corp1#configure terminal Our access-list needs to allow host C - 192.168.125.3 to the Finance Web Server 172.22.109.17 via HTTP (port 80), so our first line is this: Corp1(config)#access-list 100 permit tcp host 192.168.125.3 host 172.22.109.17 eq 80 Then, our next two instructions are these: \* Other types of access from host C to the Finance Web Server should be blocked. \* All access from hosts in the Core or local LAN to the Finance Web Server should be blocked. This can be accomplished with one command (which we need to do as our ACL needs to be no more than 3 lines long), blocking all other access to the finance web server: Corp1(config)#access-list 100 deny ip any host 172.22.109.17 Our last instruction is to allow all hosts in the Core and on the local LAN access to the Public Web Server (172.22.109.18) Corp1(config)#access-list 100 permit ip host 172.22.109.18 any Finally, apply this access-list to Fa0/1 interface (outbound direction) Corp1(config)#interface fa0/1 Corp1(config-if)#ip access-group 100 out Notice: We have to apply the access-list to Fa0/1 interface (not Fa0/0 interface) so that the access-list can filter traffic coming from both the LAN and the Core networks. To verify, just click on host C to open its web browser. In the address box type http://172.22.109.17 to check if you are allowed to access Finance Web Server or not. If your configuration is correct then you can access it. Click on other hosts (A, B and D) and check to make sure you can't access Finance Web Server from these hosts. Then, repeat to make sure they can reach the public server at 172.22.109.18. Finally, save the configuration Corp1(config-if)#end Corp1#copy running-config startup-config
