NEW QUESTION: 2You have four databases that are accessed by using an Online Transaction Processing (OLTP) application. The databases are stored on a server named SQL1 that has SQL Server 2014 installed.You plan to deploy an additional server that has SQL Server 2014 installed.You need to design a high-availability solution for the databases that meets the following requirements:If SQL1 fails, the databases must be available.Users must be able to run reports against a secondary copy of the databases.What should you include in the design?More than one answer choice may achieve the goal. Select the BEST answer.**A.** Database mirroring**B.** Log shipping**C.** Failover Clustering**D.** AlwaysOn availability groups**Answer: D****Explanation:**The AlwaysOn Availability Groups feature is a high-availability and disaster-recovery solution that provides an enterprise-level alternative to database mirroring. Introduced in SQL Server 2012, AlwaysOn Availability Groups maximizes the availability of a set of user databases for an enterprise. An availability group supports a failover environment for a discrete set of user databases, known as availability databases that fail over together.**Reference:** Failover and Failover Modes (AlwaysOn Availability Groups)
