ポリシングは、できるだけソースの近くで実行する必要があります。 **B.**

通常、ポリシングはトラフィックをドロップするのではなく、遅延させます。 **C.**

ポリシングは、過剰なトラフィックをキューイングすることにより、ネットワークの輻輳に適應します。 **Answer: A,D** Explanation: Traffic policing propagates bursts. When the traffic rate reaches the configured maximum rate (or committed information rate), excess traffic is dropped (or remarked). The result is an output rate that appears as a saw-tooth with crests and troughs. Unlike traffic shaping, traffic policing does not cause delay. Classification (which includes traffic policing, traffic shaping and queuing techniques) should take place at the network edge. It is recommended that classification occur as close to the source of the traffic as possible. Also according to this Cisco link, "policing traffic as close to the source as possible".

NEW QUESTION: 3 Which two statements about stateless firewalls are true? (Choose two.)
A. They cannot track connections.
B. They compare the 5-tuple of each incoming packet against configurable rules.
C. They are designed to work most efficiently with stateless protocols such as HTTP or HTTPS.
D. The Cisco ASA is implicitly stateless because it blocks all traffic by default.
E. Cisco IOS cannot implement them because the platform is stateful by nature.
Answer: A,B
Explanation: Explanation In stateless inspection, the firewall inspects a packet to determine the 5-tuple--source and destination IP addresses and ports, and protocol--information contained in the packet. This static information is then compared against configurable rules to determine whether to allow or drop the packet. In stateless inspection the firewall examines each packet individually, it is unaware of the packets that have passed through before it, and has no way of knowing if any given packet is part of an existing connection, is trying to establish a new connection, or is a rogue packet.
