Are you on the way to pass the D-VCFVXR-A-01 exam, D-VCFVXR-A-01 exam dumps are written to the highest standards of technical accuracy which can make you successed in the Dell VCF on VxRail Achievement D-VCFVXR-A-01 exam.

NEW QUESTION: 1 In your multitenant container database (CDB) containing pluggable database (PDBs), you granted theCREATE TABLE privilege to the common user C # # A_ADMIN in root and all PDBs. You execute thefollowing command from the root container:SQL > REVOKE create table FROM C # # A_ADMIN;What is the result?**A.** It fails and reports an error because the CONTAINER=ALL clause is not used.**B.** It fails and reports an error because the CONTAINER=CURRENT clause is not used.**C.** It excludes successfully and the CREATE TABLE privilege is revoked from C # # A_ADMIN in root andall PDBs.**D.** It executes successfully and the CREATE TABLE privilege is revoked from C # # A_ADMIN in rootonly.**E.** It executes successfully and the CREATE TABLE privilege is revoked from C # # A_ADMIN in allPDBs.**Answer: D** Explanation:Explanation/Reference:Explanation:REVOKE ..FROMIf the current container is the root:/Specify CONTAINER = CURRENT to revoke a locally granted system privilege, object privilege, or rolefrom a common user or common role. The privilege or role is revoked from the user or role only in the root.This clause does not revoke privileges granted with CONTAINER = ALL./Specify CONTAINER = ALL to revoke a commonly granted system privilege, object privilege on acommon object, or role from a common user or common role. The privilege or role is revoked from the useror role across the entire CDB. This clause can revoke only a privilege or role granted with CONTAINERALL from the specified common user or common role. This clause does not revoke privileges grantedlocally with CONTAINER = CURRENT. However, any locally granted privileges that depend on thecommonly granted privilege being revoked are also revoked.If you omit this clause, then CONTAINER = CURRENT is the default.References:

NEW QUESTION: 2 Topic 10, Ticket 8 : Redistribution of EIGRP to OSPFTopology Overview (Actual Troubleshooting lab design is for below network design)Client Should have IP 10.2.1.3 EIGRP 100 is running between switch DSW1 & DSW2OSPF (Process ID 1) is running between R1, R2, R3, R4Network of OSPF is redistributed in EIGRPBGP 65001 is configured on R1 with Webserver cloud AS 65002HSRP is running between DSW1 & DSW2 SwitchesThe company has

created the test bed shown in the layer 2 and layer 3 topology exhibits.This network consists of four routers, two layer 3 switches and two layer 2 switches.In the IPv4 layer 3 topology, R1, R2, R3, and R4 are running OSPF with an OSPF process number 1.DSW1, DSW2 and R4 are running EIGRP with an AS of 10. Redistribution is enabled where necessary.R1 is running a BGP AS with a number of 65001. This AS has an eBGP connection to AS 65002 in theISP's network. Because the company's address space is in the private range.R1 is also providing NAT translations between the inside (10.1.0.0/16 & 10.2.0.0/16) networks and outside(209.65.0.0/24) network. ASW1 and ASW2 are layer 2 switches.NTP is enabled on all devices with 209.65.200.226 serving as the master clock source.The client workstations receive their IP address and default gateway via R4's DHCP server.The default gateway address of 10.2.1.254 is the IP address of HSRP group 10 which is running on DSW1and DSW2.In the IPv6 layer 3 topology R1, R2, and R3 are running OSPFv3 with an OSPF process number 6.DSW1, DSW2 and R4 are running RIPng process name RIP_ZONE.The two IPv6 routing domains, OSPF 6 and RIPng are connected via GRE tunnel running over theunderlying IPv4 OSPF domain. Redistrution is enabled where necessary. Recently the implementation group has been using the test bed to do a `proof-of-concept' on several implementations. This involved changing the configuration on one or more of the devices. You will bepresented with a series of trouble tickets related to issues introduced during these configurations.Note: Although trouble tickets have many similar fault indications, each ticket has its own issue andsolution.Each ticket has 3 sub questions that need to be answered & topology remains same.Question-1 Fault is found on which device,Question-2 Fault condition is related to,Question-3 What exact problem is seen & what needs to be done for solutionClient is unable to ping IP 209.65.200.241**Answer:** Explanation:Solution Steps need to follow as below:When we check on client 1 & Client 2 desktop we are not receiving DHCP address from R4 ipconfig ----Client will be receiving IP address 10.2.1.3IP 10.2.1.3 will be able to ping from R4 , but cannot ping from R3, R2, R1This clearly shows problem at R4 since EIGRP is between DSW1, DSW2 & R4 and OSPF protocol is running between R4, R3, R2, R1 so routes from R4 are not propagated to R3, R2, R1Since R4 is able to ping 10.2.1.3 it means that routes are received in EIGRP & same needs to be advertised in OSPF to ping from R3, R2, R1.Need to check the routes are being advertised properly or not in OSPF & EIGRP vice-versa.From above snap shot it clearly indicates that redistribution done in EIGRP is having problem & by default all routes are denied from ospf to EIGRP... so need to change route-map name.Change required: On R4, in redistribution of EIGRP routing protocol, we need to change name of route-map to resolve the issue...So in ticket Answer to the fault condition will be as below for

NEW QUESTION: 3 When placed early in a search, which command is most effective at reducing search execution time?**A.** rename**B.** dedup**C.** fields +**D.** sort -**Answer: D**

NEW QUESTION: 4 The user is fully responsible for which action when running workloads on aws?**A.** Maintaining the underlying infrastructure components**B.** Patching the infrastructure components**C.** Implementing controls to route application traffic**D.** Maintaining physical and environmental controls**Answer: B**
