Famous brand in the market with combination of considerate services and high quality and high efficiency H21-282_V2.0 study questions.

NEW QUESTION: 1 Azure Machine Learning Studioで多重線形回帰モデルを作成しています。いくつかの独立変数は高度に相関しています。すべてのデータに対して効果的な特徴エンジニアリングを行うための適切な方法を選択する必要があります。どの3つのアクションを順番に実行する必要がありますか？回答するには、適切なアクションをアクションのリストから回答領域に移動し、正しい順序に並べます。**Answer:** Explanation: Explanation: Step 1: Use the Filter Based Feature Selection module Filter Based Feature Selection identifies the features in a dataset with the greatest predictive power. The module outputs a dataset that contains the best feature columns, as ranked by predictive power. It also outputs the names of the features and their scores from the selected metric. Step 2: Build a counting transform A counting transform creates a transformation that turns count tables into features, so that you can apply the transformation to multiple datasets. Step 3: Test the hypothesis using t-Test References: <https://docs.microsoft.com/bs-latn-ba/azure/machine-learning/studio-module-reference/filter-based-feature-selection> <https://docs.microsoft.com/en-us/azure/machine-learning/studio-module-reference/build-counting-transform>

NEW QUESTION: 2 Where does an onClick event get configured?**A.** In the start condition of a workflow**B.** In the properties of a tab in Form Builder**C.** In the properties of a field in Form Builder**D.** In the properties of a smart section in Data Modeler**Answer: C**

NEW QUESTION: 3 You issue the following query: SQL> SELECT AVG(MAX(qty)) FROM ord_items GROUP BY item_no HAVING AVG(MAX(qty))>50; Which statement is true regarding the outcome of this query?**A.** It gives an error because the HAVING clause is not valid.**B.** It gives an error because the GROUP BY expression is not valid.**C.** It executes successfully and gives the correct output.**D.** It executes successfully but does not give the correct output.**Answer: A** Explanation: Explanation/Reference: Explanation: The general form of the SELECT statement is further enhanced by the addition of the HAVING clause and becomes: SELECT column|expression|group_function(column|expression [alias]),...} FROM table[WHERE condition(s)][GROUP BY {col(s)|expr}][HAVING group_condition(s)][ORDER BY {col(s)|expr|numeric_pos} [ASC|DESC] [NULLS FIRST|LAST]]; An important difference between the HAVING clause and the other SELECT statement clauses is that it may only be specified if a GROUP BY clause is present. This dependency is sensible since group-level rows must exist

before they can be restricted. The HAVING clause can occur before the GROUP BY clause in the SELECT statement. However, it is more common to place the HAVING clause after the GROUP BY clause. All grouping is performed and group functions are executed prior to evaluating the HAVING clause.
