Server1 is configured to resolve single-label names for DNS clients.You need to view the number of queries for single-label names that are resolved by Server1.What command should you run?To answer, select the appropriate options in the answer area.Hot Area:**Answer:** Explanation: Explanation/Reference:* The Get-DnsServerStatistics cmdlet retrieves statistics of a Domain Name System (DNS) server. If the ZoneName parameter is specified, this cmdlet gets statistics for the zones specified by that parameter.* To help network administrators migrate to DNS for all name resolution, the DNS Server role in Windows Server 2008 (and later) supports a specially named zone, called GlobalNames. By deploying a zone with this name, you can have the static, global records with single-label names, without relying on WINS. These single-label names typically refer to records for important, well-known and widely-used servers-servers that are already assigned static IP addresses and that are currently managed by IT-administrators using WINS.Reference: Get-DnsServerStatistics; Deploying a GlobalNames Zone
