NEW QUESTION: 1You are designing a solution that will aggregate and analyze data from Internet of Things (IoT) devices. The solution must meet the following requirements: * Store petabytes of data * Use shared access policies to provide service connections to the IoT event source. * Conduct analysis of data in near real-time. * Provide ultra-low latency and highly scalable transaction processing. You need to recommend a technology. What should you recommend? **A.** Azure Data Lake Store **B.** Azure Table storage **C.** Azure Time Series Insights **D.** Azure Redis Cache **Answer: A** Explanation: References: <https://azure.microsoft.com/en-us/services/data-lake-store/>

NEW QUESTION: 2Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series. Start of repeated scenario. Your network contains an Active directory forest named adatum.com. All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001. Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM. Adatum.com is synchronized to Microsoft Azure Active Directory. Your company implements the Microsoft Store for Business. You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed. The company uses the applications shown in the following table. The company identifies the following requirements for software deployments: * View the Upgrade Readiness data of all the client computers. * Deploy App1 to the client computers in the marketing department. * Deploy App2 to the client computers in the human resources (HR) department. * Monitor the usage of App3. * Deploy

SalesAppLite to sales department computers that have 3 GB of RAM or less.* Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.End of repeated scenario.You need to create the Upgrade Readiness report.Which Group Policy object (GPO) setting should you configure?**A.** Diagnostics: Configure Scenario Execution Level**B.** Configure the Commercial IDC. Configure forwarder resource usage**D.** Specify intranet Microsoft update service location**E.** Audit Other Account Logon Events**Answer: B**
Explanation:
References:
<https://www.anoopcnaair.com/methods-to-configure-telemetry-for-upgrade-readiness/>

NEW QUESTION: 3You support a WLAN using dual-band 802.11ac three stream access points. All access points have both the 2.4 GHz and 5 GHz radios enabled and use 40 MHz channels in 2.4 GHz. A manager is concerned about the fact that each access point is connected using a 1 Gbps Ethernet link. He is concerned that the Ethernet link will not be able to handle the load from the wireless radios. What do you tell him?**A.** His concern is invalid because the AP will compress all data before transmitting it onto the Ethernet link.**B.** Due to 802.11 network operations and dynamic rates used by devices on the network, the two radios will likely not exceed the 1 Gbps Ethernet link .**C.** His concern is valid and the company should upgrade all Ethernet link to 10 Gbps immediately.**D.** His concern is valid and the company should immediately plan to run a second 1 Gbps Ethernet link to each AP.**Answer: C**
