NEW QUESTION: 1You have three devices enrolled in Microsoft Intune as shown in the following table. The device compliance policies in Intune are configured as shown in the following table. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Device 1: No because Device1 is in group3 which has Policy1 assigned which requires BitLocker. Device 2: No because Device2 is in group3 which has Policy1 assigned which requires BitLocker. Device2 is also in Group2 which has Policy2 assigned but the BitLocker requirement is not configured in Policy2. Device3: Yes because Device3 is in Group2 which has Policy2 assigned but the BitLocker requirement is not configured in Policy2. NEW QUESTION: 2Which of the following is NOT a characteristic of the ElGamal publickey cryptosystem? **A.** It can be used to generate digital signatures. **B.** It can perform encryption. **C.** It can perform encryption, but not digital signatures. **D.** It is based on the discrete logarithm problem. **Answer: C** Explanation: The ElGamal public key cryptosystem can perform both encryption and digital signatures based on the discrete logarithm problem. These three characteristics are shown in the examples that follow. To generate a key pair in the ElGamal system: **A.** Choose a prime number, p . **B.** Choose two random numbers, g and x (g and x must both be less than p). **C.** Calculate $y = g^x \text{ mod } p$. **D.** The private key is x and the public key is $y, g,$ and p . To encrypt a message, M , in the ElGamal system: **A.** Select a random number, j , such that j is relatively prime to $p-1$. Recall that two numbers are relatively prime if they have no common factors other than 1. **B.** Generate $w = g^j \text{ mod } p$ and $z = y^j M \text{ mod } p$. **C.** w and z comprise the ciphertext. To decrypt the message, M , in the ElGamal system, calculate $M = z/w^j \text{ mod } p$. This

can be shown by substituting the values of z and w in the equation as follows: $M = y^j M \pmod{p} / g^{jx} \pmod{p}$
Since $y^j = g^{xj} \pmod{p}$, $M = (g^{xj} M / g^{jx}) \pmod{p}$
To sign a message, M , in the ElGamal system:
A. Select a random number, j , such that j is relatively prime to $p-1$. The value of j must not be disclosed. Generate $w = g^j \pmod{p}$.
B. Solve for z in the equation $M = (xw + z) \pmod{p-1}$. The solution to this equation is beyond the scope of this coverage. Suffice to say that an algorithm exists to solve for the variable z .
C. w and z comprise the signature.
D. Verification of the signature is accomplished if $g^M \pmod{p} = y^w w^z \pmod{p}$.

NEW QUESTION: 3 Zoe is the business analyst for her organization. She is currently prioritizing the requirements based on the implementation difficulty of the requirements to help with the solution planning. Which of the following best describes the approach Zoe is taking with requirements prioritization?
A. The requirements are ranked from easiest to hardest to implement.
B. The requirements are ranked most difficult to easiest to implement.
C. The requirements are categorized by type of work, and then ranked within each category of ease of implementation to difficulty of implementation.
D. The requirements are categorized by the likelihood of management approving the requirements.
Answer: A

NEW QUESTION: 4 Why should you use an NTP server on FortiAnalyzer and all registered devices that log into FortiAnalyzer?
A. To properly correlate logs
B. To resolve host names
C. To improve DNS response times
D. To use real-time forwarding
Answer: A
