Maybe the training material at your hands is [Hybrid Cloud - Implementation Engineer Exam](#) wearisome and dull for you to study, If you give us trust we will give you a pass.

NEW QUESTION: 1You plan to allow users to run internal applications from outside the company's network. You have a Windows Server 2012 R2 that has the Active Directory Federation Services (AD FS) role installed. You must secure on-premises resources by using multi-factor authentication (MFA). You need to design a solution to enforce different access levels for users with personal Windows 8.1 or iOS 8 devices. Solution: You install a local instance of MFA Server and connect it to your Microsoft Azure MFA provider. Then, you use the Workplace Join process to configure access for personal devices to the on-premises resources. Does this meet the goal? **A. Yes B. No** **Answer: A** **Explanation:** Reference: Setting up on-premises conditional access using Azure Active Directory Device Registration <https://azure.microsoft.com/en-gb/documentation/articles/active-directory-conditional-access-on-premises-setup/>

NEW QUESTION: 2 Scenario A central government department, the Ministry of Food Hygiene (MFH), faces increasing pressure to cut costs, better manage suppliers' performance and reduce the confusion caused by inadequate internal controls, outdated standards and outdated technology. External consultants were employed to conduct a feasibility study to identify options to address the problems, and the likely costs and benefits. The following options were considered: Do nothing. Re-engineer selected business functions. Outsource selected business functions. The feasibility study concluded that there was a case for outsourcing the MFH Information Technology Division and the Facilities Division (maintenance of buildings and grounds). The recommendations were: One service provider should be contracted to provide the services currently provided by the Information Technology Division and the Facilities Division. A 10-year service contract should be agreed with the selected service provider. The feasibility study developed high-level designs of the current organization, processes, systems and operating models, plus an outline Business Case for the required project. The external consultants also made the following recommendations for the management of the project: Use PRINCE2. Set up the project with 4 management stages: Stage 1. Standard PRINCE2 initiation activities. Stage 2. Create detailed designs (future organization, processes, systems and operating models) and the service level agreement between MFH and the future service provider. Stage 3. Request and evaluate proposals, select service provider and agree contract. Stage 4. Transfer equipment and staff, transfer responsibility for service provision and run trial period. Initial estimates indicated that the project would cost £2.5m and take two years to complete. MFH senior management agreed that there was a case for outsourcing, and accepted the recommendations as a basis for the project. There is an

expected saving of £20m over 10 years. The Outsourcing project has completed the Starting up a Project process and is now in the initiation stage. Because of the strategic importance of the project, the MFH Chief Executive Officer has taken the role of Executive. A PRINCE2-experienced Project Manager has been appointed from within MFH. Staff within the business functions being outsourced will work with the external consultants who conducted the feasibility study to define the detailed designs. Lines 1 to 6 in the table below consist of an assertion statement and a reason statement. For each line identify the appropriate option, from options A to E, that applies. Each option can be used once, more than once or not at all. Hot Area: **Answer:** Explanation:

NEW QUESTION: 3 Which two statements are true about the Oracle Cloud Infrastructure Object Storage Service? (Choose two.) **A.** It can be directly attached or detached from a compute instance. **B.** It provides higher IOPS than Block Storage. **C.** Data is stored redundantly across multiple storage servers across multiple Availability Domains. **D.** It provides strong consistency. **E.** Data is stored redundantly only in one Availability Domain. **Answer: C, D** Explanation: Explanation/Reference: Reference: <https://docs.cloud.oracle.com/iaas/Content/Object/Concepts/objectstorageoverview.htm>

NEW QUESTION: 4 次の展示に示すように、Microsoft AzureでTest Appという名前のエンタープライズアプリケーションを確認しています。ドロップダウンメニューを使用して、図に示されている情報に基づいて各ステートメントを完成させる回答の選択肢を選択します。注：それぞれの正しい選択には1ポイントの価値があります。
Answer: Explanation: Explanation
