How to Verify my version of the Questions and Answers Product?

NEW QUESTION: 1You are designing an Azure application. The application includes services hosted in different geographic locations. The service locations may change.You must minimize the cost of communication between services.You need to recommend an approach for data transmission between your application and Azure services. The solution must minimize administrative effort.What should you recommend?**A.** Azure Queue storage**B.** Service Bus queue**C.** Service Management API**D.** Azure Table storage**Answer: B****Explanation:**The cost of ACS transactions is insignificant when performing messaging operations against Service Bus queues.Service Bus acquires one ACS token per a single instance of the messaging factory object. The token is then reused until it expires, after about 20 minutes. Therefore, the volume of messaging operations in Service Bus is not directly proportional to the amount of ACS transactions required to support these operations.Reference: Azure Queues and Service Bus Queues - Compared and Contrasted<https://msdn.microsoft.com/library/azure/hh767287.aspx>
