A year free updating for our CWNA-109 training materials, We wish that you can achieve your dreams and get well-paid jobs, improve your personal ability and so on.

NEW QUESTION: 1A network element (NE) forwards external traffic through a Virtual Routing and Redundancy Protocol(VRRP) protected gateway interface. If the master goes offline, how does the NE learn to forward traffic to the new master interface?**A.** The network elements use their current gateway interface ARP cache entry or send out an ARP request if the entry is timed out**B.** The master updates the forwarding table entries by delivering all frames into the network using the virtual Media Access Control (MAC) source address**C.** Upon assuming the master role, the new master advertises its presence through Gratuitous Address Resolution Protocol (ARP) messages**D.** The new master interface delivers the new virtual interface MAC address into the network via Master Advertisement Messages**Answer: A**

NEW QUESTION: 2Which two statements about SoO checking in EIGRP OTP deployments are true? (Choose two).**A.** The SoO is checked at the ingress of the backdoor link.**B.** At the ingress of the PE/CE link, the SoO in the EIGRP update is checked against the SoO within the PE/CE routing protocol.**C.** The SoO is checked at the egress of the backdoor link.**D.** During the import process, the SoO value in BGP is checked against the SoO value of the site map.**E.** At the egress of the PE/CE link, the SoO is checked against the SoO within the PE/CE routing protocol.**F.** During the reception of an EIGRP update, the SoO value in the EIGRP update is checked against the SoO value of the site map on the ingress interface.**Answer: D, F**Explanation: * SoO checking:- During the import process the SoO value in BGP update is checked against the SoO value of the site-map attached to VRF interface. The update is propagated to CE only if there is no match (this check is done regardless of protocol used on PE/CE link).- At reception of EIGRP update, the SoO value in the EIGRP update is checked against the SoO value of site-map attached to the incoming interface. This update is accepted only if there is no match (this check can optionally be done on backdoor router).Reference:
