Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.You are a database administrator for an e-commerce company that runs an online store. The company has the databases described in the following table.Each month, eight partner companies send your company comma-separated values (CSV) files that contain their sales data.You need to create a Microsoft SQL Server Integration Services (SSIS) package to load the CSV files in parallel to a single table in DB2. You must minimize the number of transformation steps that are required.What should you use?**A. Foreach Loop containerB. Balanced Data Distributor transformationC. MERGE statementD. Union All transformationE. Sequential containerF. Merge Join transformationG. Lookup transformationH. Merge transformationAnswer: B**Explanation:ExplanationThe Balanced Data Distributor (BDD) transformation takes advantage of concurrent processing capability of modern CPUs. It distributes buffers of incoming rows uniformly across outputs on separate threads. By using separate threads for each output path, the BDD component improves the performance of an SSIS package on multi-core or multi-processor machines.
