**NEW QUESTION: 1**HP MSM APs support a VSC that specifies Mbps as the highest supported data rate. Several clients to theWALN associated with this VSC.What is the throughput and bandwidth that experience?**A.** When multiple clients connects to an AP radio, each client has a potential maximum of 54 Mbps throughput.**B.** A client can transmit or receive at 54 Mbps, but all clients connected to an AP radio share a throughput less than 54 Mbps.**C.** All clients connected to the VSC share a total of 54 Mbps of throughput, no matter how many AP radio support the VSC.**D.** When multiple clients connect to an AP radio, each of those clients is limited to 54 Mbps.**Answer: D**

**NEW QUESTION: 2**A company hosts critical data in an S3 bucket. Even though they have assigned the appropriate permissions to the bucket, they are still worried about data deletion. What measures can be taken to restrict the risk of data deletion on the bucket. Choose 2 answers from the options given below Please select:**A.** Enable data at rest for the objects in the bucket**B.** Enable data in transit for the objects in the bucket**C.** Enable MFA Delete in the bucket policy**D.** Enable versioning on the S3 bucket**Answer: C,D**Explanation:ExplanationOne of the AWS Security blogs mentions the followinjVersioning keeps multiple versions of an object in the same bucket. When you enable it on a bucket Amazon S3 automatically adds a unique version ID to every object stored in the bucket. At that point, a simple DELETE action does not permanently delete an object version; it merely associates a delete marker with the object. If you want to permanently delete an object version, you must specify its version ID in your DELETE request.You can add another layer of protection by enabling MFA Delete on a versioned bucket. Once you do so, you must provide your AWS accounts access keys and a valid code from the account's MFA device in order to permanently delete an object version or suspend or reactivate versioning on the bucket.Option B is invalid because enabling encryption does not guarantee risk of data deletion.Option D is invalid because this option does not guarantee risk of data deletion.For more information on AWS S3 versioning and MFA please refer to the below URL:<https://aws.amazon.com/blogs/security/securing-access-to-aws-using-mfa-part-3/> The correct answers are: Enable versioning on the S3 bucket Enable MFA Delete in the bucket policy
