The pass rate is 98.95% for the HPE7-A02 training materials, and most candidates can pass the exam just one time.

NEW QUESTION: 1 MFA構成にはどのIPアドレススペースを含める必要がありますか？
A. 172.16.0.0/24
B. 192.168.16.0/20
C. 131.107.83.0/28
D. 192.168.0.0/20
Answer: B
Explanation:
Topic 1, Litware, Inc. Overview
Litware, Inc. is a financial company that has 1,000 users in its main office in Chicago and 100 users in a branch office in San Francisco.
Existing Environment
Internal Network Infrastructure
The network contains a single domain forest. The forest functional level is Windows Server 2016. Users are subject to sign-in hour restrictions as defined in Active Directory. The network has the IP address range shown in the following table. The offices connect by using Multiprotocol Label Switching (MPLS). The following operating systems are used on the network:
* Windows Server 2016
* Windows 10 Enterprise
* Windows 8.1 Enterprise
The internal network contains the systems shown in the following table.
Litware uses a third-party email system.
Cloud Infrastructure
Litware recently purchased Microsoft 365 subscription licenses for all users. Microsoft Azure Active Directory (Azure AD) Connect is installed and uses the default authentication settings. User accounts are not yet synced to Azure AD. You have the Microsoft 365 users and groups shown in the following table.
Planned Changes
Litware plans to implement the following changes:
* Migrate the email system to Microsoft Exchange Online
* Implement Azure AD Privileged Identity Management
Security Requirements
Litware identifies the following security requirements:
* Create a group named Group2 that will include all the Azure AD user accounts. Group2 will be used to provide limited access to Windows Analytics
* Create a group named Group3 that will be used to apply Azure Information Protection policies to pilot users. Group3 must only contain user accounts
* Use Azure Advanced Threat Protection (ATP) to detect any security threats that target the forest
* Prevent users locked out of Active Directory from signing in to Azure AD and Active Directory
* Implement a permanent eligible assignment of the Compliance administrator role for User1

Integrate Windows Defender and Windows Defender ATP on domain-joined servers* Prevent access to Azure resources for the guest user accounts by default* Ensure that all domain-joined computers are registered to Azure AD Multi-factor authentication (MFA) Requirements Security features of Microsoft Office 365 and Azure will be tested by using pilot Azure user accounts. You identify the following requirements for testing MFA.* Pilot users must use MFA unless they are signing in from the internal network of the Chicago office. MFA must NOT be used on the Chicago office internal network.* If an authentication attempt is suspicious, MFA must be used, regardless of the user location* Any disruption of legitimate authentication attempts must be minimized General Requirements Litware wants to minimize the deployment of additional servers and services in the Active Directory forest.

NEW QUESTION: 2 To affix a digital signature to a message, the sender must first create a message digest by applying a cryptographic hashing algorithm against: **A.** the entire message and thereafter enciphering the message using the sender's private key. **B.** any arbitrary part of the message and thereafter enciphering the message digest using the sender's private key. **C.** the entire message and thereafter enciphering the message digest using the sender's private key. **D.** the entire message and thereafter enciphering the message along with the message digest using the sender's private key. **Answer: C** Explanation: A digital signature is a cryptographic method that ensures data integrity, authentication of the message, and non-repudiation. To ensure these, the sender first creates a message digest by applying a cryptographic hashing algorithm against the entire message and thereafter enciphers the message digest using the sender's private key. A message digest is created by applying a cryptographic hashing algorithm against the entire message not on any arbitrary part of the message. After creating the message digest, only the message digest is enciphered using the sender's private key, not the message.

NEW QUESTION: 3 QRadar 14xx データノードは何に使用されますか？それは慣れている： **A.** 16xx 用に追加の記憶域と処理を提供します。 **B.** 17xx、18xx、および 31xx アプライアンス。 **C.** マルチテナント 31xx アプライアンスからオフense 管理タスクをオフロードします。 **D.** QRadar アプリケーション・フレームワークで複雑な「機械学習」スタイルのアプリケーションを実行します。 **Answer: D** 16xx、17xx、18xx、および 31xx アプライアンス用の長期データバックアップストアを提供します。

NEW QUESTION: 4 You are the global administrator for a company's Azure subscription. The company uses Azure Active Directory Premium and the Application Access Panel. You are configuring access to a Software as a Service (SaaS) application. You need to ensure that the sales team lead is able to manage user access to the application but is unable to modify administrative access to the application. In the Azure portal, what should you do? **A.** Create an Azure group and assign it to the SaaS application. Create an Azure user with the Global Admin role, and assign the user as the owner of the new group. **B.** Create an Azure group and assign it to the SaaS application. Create an Azure user with the Service Admin role, and assign the user as the owner of the new group. **C.** Create an Azure group and assign it to the SaaS application. Create an Azure user with the User Admin role, and assign the user as the owner of the new group. **D.** Set the values of the Delegated group management and Users can create groups settings to Enabled. **Answer: C**
