NEW QUESTION: 4Your network contains an Active Directory domain named contoso.com. The domain contains multiple sites. You plan to deploy DirectAccess. The network security policy states that when client computers connect to the corporate network from the Internet, all of the traffic destined for the Internet must be routed through the corporate network. You need to recommend a solution for the planned DirectAccess deployment that meets the security policy requirement. What should you include in the recommendation?
A. Set the ISATAP State to state enabled.
B. Enable force tunneling.
C. Enable split tunneling.
D. Set the ISATAP State to state disabled.
Answer: B
Explanation:
<http://blogs.technet.com/b/csstwplatform/archive/2009/12/15/directaccess-how-toconfigure-force-tunneling-for-da-so-that-client-are-forced-to-use-ip-https.aspx> You can configure

DirectAccess clients to send all of their traffic through the tunnels to the DirectAccess server with force tunneling. When force tunneling is configured, DirectAccess clients that detect that they are on the Internet modify their IPv4 default route so that default route IPv4 traffic is not sent. With the exception of local subnet traffic, all traffic sent by the DirectAccess client is IPv6 traffic that goes through tunnels to the DirectAccess server.
