Photoexperienceacademy' s very valuable braindumps [Reliable PL-300 Learning Materials](#) are meant to level your way to a brilliant certification exam success.

NEW QUESTION: 1Your Exchange Server 2007 organization contains two Exchange servers. The roles on the two servers are configured as shown in the following table
Two users named Marc and Mari a have mailboxes on ExchMb1. Marcs computer is on s egment A.Marias computer is on s egment B.T he Exchange servers are on s egment C .M arc sends a message to Mari a . The message leaves Marcs Outbox and is listed in his Sent Items folder. However, the message is never delivered to Mari as mailbox . You need to find out the most likely cause of the problem . What should you do?**A.** On ExchMb1, run the Test-MAPIConnectivity -Server ExchMb1 cmdlet.**B.** On ExchHub1, run the Test-ServiceHealth cmdlet.**C.** On ExchMb1, run the Test-ServiceHealth cmdlet.**D.** On a computer on segment A, run the Test-MAPIConnectivity -Server ExchMb1 cmdlet.**Answer: B**
Explanation:Test-ServiceHealth -
<http://technet.microsoft.com/en-us/library/aa998852.aspx>The Server parameter specifies the server on which you will check that the required services are running. If you do not specify this parameter, the command will check the services on the local server.

NEW QUESTION: 2Even though your company has a thorough procedure for testing applications in a pre- production environment prior to production deployment, you have decided to conduct additional testing of a particular application after it is deployed. You choose to deploy the application in administration mode.Which three statements are true? (Choose three.)**A.** The application deployment must use the -redeploy option using a unique version string.**B.** The application must first be distributed to the targeted server prior to starting it in administration mode.**C.** After testing, the application can be dynamically transitioned to start accepting all client requests.**D.** The application cannot have any dependencies on any shared Java EE libraries.**E.** You must configure an administration port for the entire domain, or an administration channel for the targeted server.**Answer: B,C,E**
Explanation:B: Distributing an application copies deployment files to target servers and places the application in a prepared state. You can then start the application in Administration mode, which restricts access to the application to a configured Administration channel so you can perform final testing without opening the application to external client connections or disrupting connected clients.C: Distributing an application prepares it for deployment by copying its deployment files to all target servers and validating it. After you distribute an application, you can start it in Administration mode, which restricts access to the application to a configured Administration channel and allows you to distribute the application to a production environment (or distribute a new version of an application) without opening the application to external client connections.E: While in Administration mode, you can connect to

an application only via a configured Administration channel. This allows you to perform final ("sanity") checking of the application directly in the production environment without disrupting clients. After performing final testing, you can either undeploy the application to make further changes, or start the application to make it generally available to clients.
