NEW QUESTION: 1 The Universal Containers Einstein Analytics team built a dashboard with two widgets: 1. List widget associated to the step "Type_2" and grouped by the dimension "Type" (multi-selection) 2. Pie chart widget associated to the step "Step_pie_3" and grouped by the dimension "Type" The team wants to use bindings so any selection in the List widget will filter the Pie chart. Additional notes: * The steps use different datasets. * Users should be able to choose more than one Type (multi-selection). What is the right syntax for the binding? A) B) C) D)
A. Option B B. Option D C. Option A D. Option C
Answer: D

NEW QUESTION: 2 A serious vulnerability is reported in the firewall software used by an organization. Which of the following should be the immediate action of the information security manager? A. Block inbound traffic until a suitable solution is found B. Commission a penetration test C. Obtain guidance from the firewall manufacturer D. Ensure that all OS patches are up-to-date
Answer: C
Explanation: The best source of information is the firewall manufacturer since the manufacturer may have a patch to fix the vulnerability or a workaround solution. Ensuring that all OS patches are up-to-date is a best practice, in general, but will not necessarily address the reported vulnerability. Blocking inbound traffic may not be practical or effective from a business perspective. Commissioning a penetration test will take too much time and will not necessarily provide a solution for corrective actions.

NEW QUESTION: 3 An administrator is planning a PowerHA implementation for a database and application. The application is dependent on the database being available before the application is started. If the database is moved from one node to another, the application will need to be re-started. The database and application will be in different resource groups. How can this be achieved within PowerHA? A. The application resource group can be configured as the parent of the database resource group. B. The application can be controlled from a post event to the rg_move_finish event. C. A sequential processing order for the resource groups can be set, specifying the database and then the application. D. The application resource group can be configured as a child of the database resource group.
Answer: D
