NEW QUESTION: 1 Jurisdictions have a broad range of privacy requirements pertaining to the handling of personal data and information. Which jurisdiction requires all storage and processing of data that pertains to its citizens to be done on hardware that is physically located within its borders? **A.** European Union **B.** Russia **C.** Japan **D.** United States **Answer: B** **Explanation:** Explanation/Reference: Explanation: The Russian government requires all data and processing of information about its citizens to be done solely on systems and applications that reside within the physical borders of the country. The United States, European Union, and Japan focus their data privacy laws on requirements and methods for the protection of data, rather than where the data physically resides.

NEW QUESTION: 2 You are presenting an HPE 3PAR solution to a new customer. Your proposal includes a transparent failover capability of applications between data centers. The customer has concerns about returning service to the initial configuration and direction of data flow (failback) following a failover event. What should you explain to the customer to address this concern? **A.** There are specific tools for failback that are easy to use. **B.** The processes for failover and failback are equally transparent to the hosts. **C.** After restoring the data from a backup device, the failback is initiated automatically. **D.** Failback is initiated automatically when the failed storage system is in service again. **Answer: D** **Explanation:** Explanation/Reference: Explanation:

NEW QUESTION: 3 An environment has the following routing rules set: If a report using the 'Australia Package' is run by a user belonging to 'Australia Group', which server group will the request be sent to? **A.** The request will be sent to the first available server because there is more than one rule for the Australia Package. **B.** Group 2 **C.** Group 1 **D.** The request would fail because there is more than one rule for the Australia Package and only one for the Australia group. **Answer: B** **Explanation:** Explanation/Reference: Unlike routing keywords, the order in which the routing rules are listed affects how they are applied. A rule is matched when properties associated with the package or the group or role involved in the request satisfy the criteria of the rule. The rules are evaluated in order until the first one is matched, and the request is

routed to the server group named by the first rule that was matched. You can change the order of the rules by clicking Modify the sequence. References:
