Streamsを使用しますAmazon Kinesis Data Firehoseを使用してデータをAmazon

Exactly-Once Processing and Lower Prices for Standard Queues You can now use Amazon

Simple Queue Service (SQS) for applications that require messages to be processed in a strict

sequence and exactly once using First-in, First-out (FIFO) queues. FIFO queues are designed to

ensure that the order in which messages are sent and received is strictly preserved and that

each message is processed exactly once.Amazon SQS is a reliable and highly-scalable managed

message queue service for storing messages in transit between application components. FIFO

queues complement the existing Amazon SQS standard queues, which offer high throughput,

best-effort ordering, and at-least-once delivery. FIFO queues have essentially the same features

as standard queues, but provide the added benefits of supporting ordering and exactly-once

processing. FIFO queues provide additional features that help prevent unintentional duplicates

from being sent by message producers or from being received by message consumers.

Additionally, message groups allow multiple separate ordered message streams within the

same queue.
