NEW QUESTION: 1Which statement about the BGP originator ID is true?**A.** The originator ID is set to match the cluster **IB.** The route reflector sets the originator ID to the router ID of the route reflector client that injects the route into the AS.**C.** The route reflector always sets the originator ID to its own router ID.**D.** The route reflector client that injects the route into the AS sets the originator ID to its own router ID.**Answer: B****Explanation:**An RR reflecting the route received from a RR-Client adds: - Originator ID- a 4-byte BGP attribute that is created by the RR. This attribute carries the Router ID of the originator of the route in the local AS. If the update comes back to the originator, it ignores the update. - Cluster List- A Cluster List is a list of Cluster IDs that an update has traversed. When a route reflector sends a route received from a client to a non-client, it appends the local Cluster ID. If a route reflector receives a route whose Cluster List contains the local Cluster ID, it ignores the update.**Reference:**
