NEW QUESTION: 1A. Option B**B.** Option D**C.** Option A**Answer: A****Explanation:** ExplanationWith MVC4 a new attribute has been introduced, namely the [AllowAnonymous] attribute. Together with the[Authorize] attribute, you can now take a white-list approach instead. The white-list approach is accomplished by dressing the entire controller with the [Authorize] attribute, to force authorization for all actions within that controller. You can then dress specific actions, that shouldn't require authorization, with the[AllowAnonymous] attribute, and thereby white-listing only those actions. With this approach, you can be confident that you don't, by accident, forget to dress an action with the [Authorize], leaving it available to anyone, even though it shouldn't.References:
