NEW QUESTION: 1 Which process or system can be monitored by the BIG-IP system and used as a failover trigger in a redundant pair configuration?**A.** CPU utilization percentage**B.** bandwidth utilization**C.** duplicate IP address**D.** VLAN communication ability**Answer: D**

NEW QUESTION: 2 On your logical standby database, you specified these rules:
SQL> EXECUTE DBMS_LOGSTBY.SKIP (STMT=> 'DML', -SCHEMA_NAME => 'HR', -OBJECT_NAME=> 'EMP_NEW');
SQL> EXECUTE DBMS_LOGSTBY.SKIP (STMT=> 'DML', -SCHEMA_NAME => 'HR', -OBJECT_NAME=> 'EMP_OLD');
After completion of the weekend batch cycle you attempt to delete the SQL Apply filters:
SQL> EXECUTE DBMS_LOGSTBY.UNSKIP (STMT=> 'DML', -SCHEMA_NAME => 'HR', -OBJECT_NAME=> 'EMP%');
Which is true regarding the execution of the UNSKIP procedure?**A.** It succeeds only if all DML statements executed on the primary have been applied on the logical standby deleting the SQL Apply filter.**B.** It succeeds but the SQL Apply filters are not deleted.**C.** It succeeds only if SQL apply is stopped before deleting the SQL Apply filter.**D.** It deletes both the SQL Apply filters.**E.** It returns an error because the syntax to delete a SQL Apply filter must specify the same object names as specified when the filter was added.

Answer: E Explanation: Explanation The UNSKIP procedure reverses the actions of the SKIP procedure by finding the record, matching all the parameters, and removing the record from the system table. The match must be exact, and multiple skip actions can be undone only by a matching number of unskip actions. You cannot undo multiple skip actions using wildcard characters. References:
