**Answer: D**Explanation:L2TPv3 defines the L2TP protocol for tunneling Layer 2 payloads over an IP core network using Layer 2 virtual private networks (VPNs). Benefits of this feature include the following:Simplifies deployment of VPNs.Does not require Multiprotocol Label Switching (MPLS) virtual private network (VPN).Supports Layer 2 tunneling over IP for any payload. This is something you can do manually or you could use Remote PowerShell to automate the configuration of your VM after deployment for example.But now there's a third alternative available allowing you customize your VM: the CustomScript extension.This CustomScript extension is executed by the VM Agent and it's very straightforward: you specify which files it needs to download from your storage account and which file it needs to execute. You can even specify arguments that need to be passed to the script. The only requirement is that you execute a .ps1 file.Reference: Customizing your Microsoft Azure Virtual Machines with the new CustomScript extension
