The price of Our NCP-EUC exam questions is affordable and we provide the wonderful service before and after the sale to let you have a good understanding of our NCP-EUC study materials before your purchase and convenient download procedures in case you want to have a check on the NCP-EUC test.

If you have the needs like this, just choose us, Photoexperienceacademy offer you all the Q&A of the NCP-EUC real test, Most IT candidates prefer to choose Nutanix Certified Professional - End - User Computing test engine rather than the pdf format dumps.

NEW QUESTION: 1A. Option DB. Option CC. Option BD. Option AAnswer: D

NEW QUESTION: 2Hot Area:**Answer:** Explanation:Explanation:Note:*Reverse proxy server A reverse proxy server that supports Secure Sockets Layer (SSL), such as Microsoft Forefront Unified Access Gateway (UAG), enables you to publish SharePoint sites across the corporate firewall.*See step 2 below:After the SharePoint site is published outside the firewall, you must add the site to a zone that allows for cross-firewall access. A cross-firewall access zone is used to generate external PC and mobile URLs in mobile alert messages, and enables users to send an externally available URL when they click the E-mail a link or Alert Me button on the ribbon. To configure a cross-firewall access zone You must be a member of the Farm Administrators group.Reference: Configure external access for mobile devices in SharePoint 2013

NEW QUESTION: 3You are working with an IT department that has embraced Service-Oriented Integration (SOI). The development team has created a catalog of services that rigidly follow the layering of the SOI architecture as illustrated by the Logical View. Clients are allowed to call only Business Process Services, Business Process Services only call Business Services, Business Services only call Data Services, and so on, with each call going through the Mediation Layer. Unfortunately, the quality assurance team has discovered during user acceptance testing that the latency of applications the Business Process Services is unacceptable.What advice would you give the development team to help reduce the latency without sacrificing adherence to the SOI architecture?**A.** Change the SOA Services to bypass the Mediation Layer when calling other SOA Services. The Mediation Layer should be used only between the clients and the SOA Services. The Mediation Layer should not be used between SOA Services.**B.** Allow clients and SOA Services to use large-granularity operations. Each operation on the Business Process Service should return an entire data entity or multiple data entities. This reduces the number of client calls required and, therefore, the overall latency.**C.** The developers are accurately following the SOI architecture. Reducing the latency will require that some of the SOI architecture concepts be relaxed or violated.**D.** Remove all data transformation from the Mediation Layer because data transformations are too computationally expensive, where required, change the interface of the SOA Services to use a single data model so that data transformations are not needed.**Answer: B**Explanation:Explanation/Reference:Reducing the number of calls could reduce latency.Note: The Mediation Layer provides loose coupling for the entire architecture. It decouples the layers of the architecture as well as decoupling external users of the layers from the specific layers in the architecture.The primary purpose of this layer in the architecture is to facilitate communication between layers in the architecture and between this architecture and the systems that connect to this architecture. This layer is infrastructure in the truest sense and therefore rarely maps directly to business requirements. However, this layer provides key capabilities that make the architecture service oriented and is the primary focus for meeting non-functional requirements such as scalability, reliability,

availability, maintainability, etc. Reference: Oracle Reference Architecture, Service-Oriented Integration, Release 3.0
