It is very fast and easy, You should not worry about it, You will never regret buying our D-PDM-A-01 study engine!

**NEW QUESTION: 1**You have a data model that you plan to implement in an Azure SQL data warehouse as shown in the following exhibit.All the dimension tables will be less than 5 GB after compression, and the fact table will be approximately 6 TB.Which type of table should you use for each table? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.**Answer:** Explanation:ExplanationBox 1: Replicated  
Replicated tables are ideal for small star-schema dimension tables, because the fact table is often distributed on a column that is not compatible with the connected dimension tables. If this case applies to your schema, consider changing small dimension tables currently implemented as round-robin to replicated.Box 2: ReplicatedBox 3: ReplicatedBox 4: Hash-distributedFor Fact tables use hash-distribution with clustered columnstore index. Performance improves when two hash tables are joined on the same distribution column.
