**NEW QUESTION: 1** A user has created a Cloudformation stack. The stack creates AWS services, such as EC2 instances, ELB, AutoScaling, and RDS. While creating the stack it created EC2, ELB and AutoScaling but failed to create RDS. What will Cloudformation do in this scenario?**A.** It will warn the user about the error and ask the user to manually create RDS**B.** Cloudformation can never throw an error after launching a few services since it verifies all the steps before launching**C.** Rollback all the changes and terminate all the created services**D.** It will wait for the user's input about the error and correct the mistake after the input**Answer: C****Explanation:** Explanation AWS Cloudformation is an application management tool which provides application modelling, deployment, configuration, management and related activities. The AWS Cloudformation stack is a collection of AWS resources which are created and managed as a single unit when AWS CloudFormation instantiates a template. If any of the services fails to launch, Cloudformation will rollback all the changes and terminate or delete all the created services.

**NEW QUESTION: 2** You work as a Software Developer for UcTech Inc. You are building a Web site that will contain study materials on the Java language. The company wants that members can access all the pages, but nonmembers have only limited access to the Web site pages. Which of the following security mechanisms will you use to accomplish the task?**A.** Data integrity**B.** Authorization**C.** Authentication**D.** Confidentiality**Answer: B**

**NEW QUESTION: 3** The orientation program at Company X is considered very intense. New employees are given a crash course in organizational philosophy, and are discouraged from voicing their opinions or concerns. Which type of people processing strategy is Company X using?**A.** collective**B.** divestiture**C.** investiture**D.** contest**Answer: B****Explanation:** Explanation: Company X is using a divestiture people processing strategy. This type of strategy aims to reduce the influence of personal characteristics on the organization. Military institutions typically employ a divestiture people processing strategy, with the aim of making individual

soldiers subservient to the imperatives of the group. Investiture people processing strategies, on the other hand, give new employees a chance to express themselves and apply their personal idiosyncrasies to the organization. Contest people processing strategies do not sort new employees by interest or ability; instead, they put every new employee through the same program, and make decisions about placement once orientation is complete. Finally, collective people processing strategies emphasize cooperation between new employees.
