**NEW QUESTION: 1** Which of the following determines that the product developed meets the projects goals? **A.** verification **B.** validation **C.** accuracy **D.** concurrence **Answer: B** **Explanation:** Software Development Verification vs. Validation: Verification determines if the product accurately represents and meets the design specifications given to the developers. A product can be developed that does not match the original specifications. This step ensures that the specifications are properly met and closely followed by the development team. Validation determines if the product provides the necessary solution intended real-world problem. It validates whether or not the final product is what the user expected in the first place and whether or not it solve the problem it intended to solve. In large projects, it is easy to lose sight of overall goal. This exercise ensures that the main goal of the project is met. From DITSCAP: 6.3.2. Phase 2, Verification. The Verification phase shall include activities to verify compliance of the system with previously agreed security requirements. For each life-cycle development activity, DoD Directive 5000.1 (reference (i)), there is a corresponding set of security activities, enclosure 3, that shall verify compliance with the security requirements and evaluate vulnerabilities. 6.3.3. Phase 3, Validation. The Validation phase shall include activities to evaluate the fully integrated system to validate system operation in a specified computing environment with an acceptable level of residual risk. Validation shall culminate in an approval to operate. NOTE: DIACAP has replace DITSCAP but the definition above are still valid and applicable for the purpose of the exam. **NEW QUESTION: 3** You are the Office 365 administrator for your company. The company uses Active Directory Federation Services (AD FS) to provide single sign-on to cloud-based services.

You enable multi-factor authentication. Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations. You need to configure the environment. What should you do? **A.** Disable AD FS multi-factor authentication. **B.** Configure an IP whitelist for the main office location. **C.** Disable the AD FS proxy. **D.** Configure an IP blacklist for the main office location. **Answer: B**  
Explanation: With ADFS you now get the option to whitelist an IP for multi-factor authentication (MFA). For example, if you enable multi-factor authentication, users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations. References:
