### **NEW QUESTION: 1**

PaaSソリューションのディザスタリカバリ要件を満たすために何を実装する必要がありますか？**A.** 常時オンの可用性グループ**B.** アベイラビリティゾーン**C.** フェイルオーバーグループ**D.** ジオレプリケーション

**Answer: C**  
**Explanation:** Scenario: In the event of an Azure regional outage, ensure that the customers can access the PaaS solution with minimal downtime. The solution must provide automatic failover. The auto-failover groups feature allows you to manage the replication and failover of a group of databases on a server or all databases in a managed instance to another region. It is a declarative abstraction on top of the existing active geo-replication feature, designed to simplify deployment and management of geo-replicated databases at scale. You can initiate failover manually or you can delegate it to the Azure service based on a user-defined policy. The latter option allows you to automatically recover multiple related databases in a secondary region after a catastrophic failure or other unplanned event that results in full or partial loss of the SQL Database or SQL Managed Instance availability in the primary region.
