NEW QUESTION: 1 A business has recently deployed laptops to all sales employees. The laptops will be used primarily from home offices and while traveling, and a high amount of wireless mobile use is expected. To protect the laptops while connected to untrusted wireless networks, which of the following would be the BEST method for reducing the risk of having the laptops compromised?**A.** Virtualization**B.** OS hardening**C.** MAC filtering**D.** Application white-listing**Answer: B**

NEW QUESTION: 2 Your customer has a group of administrators that assist with all aspects of managing scheduled offerings. Different administrators have different responsibilities for defining offerings, removing offerings and answering internal questions on the offering schedule. What needs to be configured to enable these functions?**A.** Apply domain restrictions for scheduled offerings to the admin roles**B.** Use options listed on the Actions tab for scheduled offerings to assign permissions to the admin roles**C.** Assign workflows to the admin roles to add, delete and view scheduled offerings**D.** Identity quick link for the scheduled offering wizard for the admin roles**Answer: C**

NEW QUESTION: 3 **A.** Option **A** **B.** Option **D** **C.** Option **B** **D.** Option **C** **Answer: C** **Explanation:** Explanation A NAS is an inexpensive storage solution suitable for small offices. Individual files can be encrypted by using the EFS (Encrypted File System) functionality provided by the NTFS file system. NAS typically uses a common Ethernet network and can provide storage services to any authorized devices on that network. Two primary NAS protocols are used in most environments. The choice of protocol depends largely on the type of computer or server connecting to the storage. Network File System (NFS) protocol usually used by servers to access storage in a NAS environment. Common Internet File System (CIFS), also sometimes called Server Message Block (SMB), is usually used for desktops, especially those running Microsoft Windows. Unlike DAS and SAN, NAS is a file-level storage technology. This means the NAS appliance maintains and controls the files, folder structures, permission, and attributes of the data it holds. A typical NAS deployment integrates the NAS appliance with a user database, such as Active Directory, so file permissions can be assigned based on established users and groups. With Active Directory integration, most Windows New Technology File System (NTFS)

permissions can be set on the files contained on a NAS device.

NEW QUESTION: 4 DRAG DROP You are building a SQL Server Integration Services (SSIS) package to load product data sourced from a SQL Azure database to a data warehouse. Before the product data is loaded, you create a batch record by using an Execute SQL task named Create Batch. After successfully loading the product data, you use another Execute SQL task named Set Batch Success to mark the batch as successful. You need to create and execute an Execute SQL task to mark the batch as failed if either the Create Batch or Load Products task fails. Which three steps should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)
