NEW QUESTION: 1 次のセキュリティが設定されたEC2インスタンスがあります。

- a. セキュリティグループで許可されるICMPインバウンド
- b. セキュリティグループで設定されていないICMPアウトバウンド
- c. ネットワークACLで許可されるICMPインバウンド
- d. ネットワークACLでICMPアウトバウンドが拒否されました

インスタンスに対してフローログが有効になっている場合、次のフローレコードのどれが記録されますか？以下のオプションから3つの回答を選択してください。A.

セキュリティグループに基づく応答の拒否レコードB.

セキュリティグループに基づくリクエストのACCEPTレコードC.

NACLに基づくリクエストのACCEPTレコードD. NACLに基づく応答の拒否レコード**Answer: B,C,D**

Explanation: This example is given in the AWS documentation as well. For example, you use the ping command from your home computer (IP address is 203.0.113.12) to your instance (the network interface's private IP address is 172.31.16.139). Your security group's inbound rules allow ICMP traffic and the outbound rules do not allow ICMP traffic however, because security groups are stateful, the response ping from your instance is allowed. Your network ACL permits inbound ICMP traffic but does not permit outbound ICMP traffic. Because network ACLs are stateless, the response ping is dropped and will not reach your home computer. In a flow log, this is displayed as 2 flow log records: An ACCEPT record for the originating ping that was allowed by both the network ACL and the security group, and therefore was allowed to reach your instance. A REJECT record for the response ping that the network ACL denied. Option C is invalid because the REJECT record would not be present. For more information on Flow Logs, please refer to the below URL:

<http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/flow-logs.html> The correct answers are: An ACCEPT record for the request based on the Security Group, An ACCEPT record for the request based on the NACL, A REJECT record for the response based on the NACL

NEW QUESTION: 2 Refer to the exhibit. Which set of configurations will result in all ports on both switches successfully bundling into an EtherChannel? A. switch1 channel-group 1 mode active switch2 channel-group 1 mode auto B. switch1 channel-group 1 mode on switch2 channel-group 1 mode auto C. switch1 channel-group 1 mode desirable switch2 channel-group 1

mode passive

D. switch1channel-group 1 mode desirable
switch2channel-group 1 mode auto

Answer: D

Explanation: The different etherchannel modes are described in the table below:

| Mode | Description |
|-----------|--|
| active | Places an interface into an active negotiating state, in which the interface starts negotiations with other interfaces by sending LACP packets. |
| auto | Places an interface into a passive negotiating state, in which the interface responds to PAgP packets it receives but does not start PAgP packet negotiation. This setting minimizes the transmission of PAgP packets. |
| desirable | Places an interface into an active negotiating state, in which the interface starts negotiations with other interfaces by sending PAgP packets. |
| on | Forces the interface into an EtherChannel without PAgP or LACP. With the on mode, a usable EtherChannel exists only when an interface group in the on mode is connected to another interface group in the on mode. |
| passive | Places an interface into a passive negotiating state, in which the interface responds to LACP packets that it receives, but does not start LACP packet negotiation. This setting minimizes the transmission of LACP packets. |

Both the auto and desirable PAgP modes allow interfaces to negotiate with partner interfaces to determine if they can form an EtherChannel based on criteria such as interface speed and, for Layer 2 EtherChannels, trunking state and VLAN numbers. Interfaces can form an EtherChannel when they are in different PAgP modes as long as the modes are compatible. For example: An interface in the desirable mode can form an EtherChannel with another interface that is in the desirable or auto mode. An interface in the auto mode can form an EtherChannel with another interface in the desirable mode. An interface in the auto mode cannot form an EtherChannel with another interface that is also in the auto mode because neither interface starts PAgP negotiation. An interface in the on mode that is added to a port channel is forced to have the same characteristics as the already existing on mode interfaces in the channel.
