JN0-105 Dumps and Practicing Software for Hands-on Experience of JN0-105 exam, But you don't need to worry about it at all when buying our JN0-105 study materials.

**NEW QUESTION: 1**After completing the OceanStor VIS6600T application networking, you first need to set up an arbitration disk to ensure normal business operation even after a split brain occurs. Which of the following errors about the configuration of the quorum disk is wrong?  
**A.** inspection found that there is a fault condition disk in the arbitration disk, you need to promptly repair or replace the fault arbitration disk  
**B.** In the dual live scenario, when there is a third-party site arbitration array, the arbitration disks are placed on the third-party site arbitration array and an independent UPS power supply is deployed  
**C.** Storage arrays include Huawei and IBM arrays. The arbitration disks are preferably configured on Huawei arrays  
**D.** In the absence of a third-party arbitration site, the quorum disk selects 3 LUNs of the same RAID group in the same array with a size of 1GB  
**Answer: D**

**NEW QUESTION: 2**What would be the effect of a lower tax rate on the ending balance of ordinary shares and on dividends paid for the year?  
**A.** Option D  
**B.** Option C  
**C.** Option B  
**D.** Option A  
**Answer: B**  
**Explanation:** The balance in the ordinary shares account represents share capital i.e. capital contributed by owners, not earnings retained in the business. It is not affected by a change in tax rate. Dividends will increase, not however, because they are a constant percentage of after-tax earnings. An entity reports the following account balances at year-end: The opening balance of ordinary shares was US \$100,000. The opening balance of ordinary earnings was US \$82,500. The entity had 10,000 ordinary shares outstanding all year. No dividends were paid during the year.

**NEW QUESTION: 3**A network engineer is configuring a pair of 6248 Fabric Interconnects, each with dual 10G uplinks to a parent switch. One design requirement is to ensure a specific server is able to use 10G of throughput to the LAN without contention from other servers within the 5108 chassis. Which technology will accomplish this?  
**A.** LAN Pin Groups  
**B.** Port-Channels  
**C.** Unified Ports  
**D.** System OoS Policy  
**Answer: A**

**NEW QUESTION: 4**Locating datacenters close to target markets is the result of which of the following strategic initiatives?  
**A.** Geoproximity  
**B.** Geography  
**C.** Geodiversity  
**D.** Localization  
**Answer: A**  
**Explanation:** Azure allows specification of geographical regions or affinity groups. Geographical regions are related to the data centers, like North Central US, South Central US, Anywhere US, East Asia, North Europe, and so on. The list of options will grow as more data centers are added. Instead of selecting a region, it is possible to specify an affinity group. Affinity groups are hints to Azure that essentially state that everything within the group should be as close in proximity as Azure will allow. That usually means keeping items within the same data center, which besides having the benefit of geo-location, can sometimes offer performance improvements for communication.
