NEW QUESTION: 1 Which are two uses of the NSX DLR protocol address? (Choose two.)
A. When configuring OSPF the protocol address is used to forward traffic to peers.
B. When configuring OSPF the protocol address is used by the protocol to form adjacencies with peers.
C. When configuring BGP the protocol address is used to forward traffic to peers.
D. When configuring BGP the protocol address is used by the protocol to form adjacencies with peers.

Answer: A,D

NEW QUESTION: 2 Who is responsible for determining which processes from the Process Groups will be employed and who will be performing them?
A. Project sponsor and functional manager
B. Project team and functional manager
C. Project sponsor and project manager
D. Project manager and project team
Answer: D
Explanation: Explanation: The project management processes are presented as discrete elements with well-defined interfaces. However, in practice they overlap and interact in ways that are not completely detailed here. Most experienced project management practitioners recognize there is more than one way to manage a project. The specifics for a project are defined as objectives that must be accomplished based on complexity, risk, size, time frame, project team's experience, access to resources, amount of historical information, the organization's project management maturity, and industry and application area. The required Process Groups and their constituent processes are guides to apply appropriate project management knowledge and skills during the project. In addition, the application of the project management processes to a project is iterative and many processes are repeated and revised during the project. The project manager and the project team are responsible for determining what processes from the Process Groups will be employed, by whom, and the degree of rigor that will be applied to the execution of those processes to achieve the desired project objective.

NEW QUESTION: 3 Which of the following types of inventory is characterized by item quantity gradually being depleted then replenished?
A. Anticipation
B. Cycle
C. Pipeline
D. Decoupling

Answer: B
