NEW QUESTION: 3Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 and a domain controller named DC1. On Server1, you configure a collector-initiated subscription for the Application log of DC1. The subscription is configured to collect all events. After several days, you discover that Server1 failed to collect any events from DC1, although there are more than 100 new events in the Application log of DC1. Reference 2: <http://technet.microsoft.com/en-us/library/cc748890.aspx> To configure computers in a domain to forward and collect events 1. Log on to all collector and source computers.
