NEW QUESTION: 2There is a five-day car rally race across Europe. The race coordinators are using a Kinesis Stream and IOT sensors to monitor the movement of the cars. Each car has a sensor and data is getting back to the stream with the default stream settings. On the last day of the rally, data is sent to S3. When you go to interpret the data in S3 there is only data for the last day and nothing for the first 4 days. Which of the following is the most probable cause of this? Choose the correct answer.**A.** You did not have versioning enabled and would need to create individual buckets to prevent the data from being overwritten.**B.** You needed to use EMR to send the data to S3, Kinesis Streams are only compatible with DynamoDB.**C.** Data records are only accessible for a default of 24 hours from the time they are added to a stream.**D.** One of the sensors failed, so there was no data to record**Answer: C**Explanation:Streams supports changes to the data record retention period of your stream. An Amazon Kinesis stream is an ordered sequence of data records meant to be written to and read from in real-time.Data records are therefore stored in shards in your stream temporarily. The time period from when a record is added to when it is no longer accessible is called the retention period. An Amazon

Kinesis stream stores records from 24 hours by default, up to 168 hours. Reference: <http://docs.aws.amazon.com/streams/latest/dev/kinesis-extended-retention.html>
