NEW QUESTION: 4A datalink can best be described as_____**A. the software connecting the Internet Layer and the Physical Layer****B. a logical object used for IP Multipathing****C. a driver for a Network Interface Card****D. a device that provides Classless Inter-Domain Routing****Answer: B**

Explanation:**Explanation/Reference:****Explanation:**The command dladm is used to configure data-link interfaces in Sun Solaris. A configured data-link is represented in the system as interface that can be used for TCP/IP. Each data-link relies on either a single network device or an link aggregation device to send & recieve packets.**Network interfaces provide the connection between the system and the network. These interfaces are configured over data links, which in turn correspond to instances of hardware devices in the system.**In the current

model of the network stack, interfaces and links on the software layer build on the devices in the hardware layer. More specifically, a hardware device instance in the hardware layer has a corresponding link on the data-link layer and a configured interface on the interface layer. This one-to-one relationship among the network device, its data link, and the IP interface is illustrated in the figure that follows. Network Stack Showing Network Devices, Links, and Interfaces:
