NEW QUESTION: 1Which type of security control is defense in depth?**A.** Botnet mitigation**B.** Risk analysis**C.** Overt and covert channels**D.** Threat mitigation**Answer: D****Explanation:** Explanation/Reference:Explanation:Defense in-depth is a technique that uses many layers of network defense to secure a network and all devices connected to that network. The theory behind defense in-depth is to deploy different layers of security in key parts of the network to detect, contain and ultimately stop an attack.Reference:
<http://security2b.blogspot.com/2006/12/what-is-defense-in-depth-and-why-is-it.html>

NEW QUESTION: 2Which of the following statements apply to the SAP Enterprise Portal?(Choose two)**A.** The portal is an interface for managing variants of frequently-used transactions.**B.** The portal is only a source of information (display function) and is not used for processing data.**C.** The portal buffers all data so that work can continue in the portal if one of the assigned systems fails.**D.** The portal enables you to access SAP ERP without having the SAP GUI installed on your computer**E.** The portal is a uniform framework for accessing company data from different systems.**Answer: D,E**

NEW QUESTION: 3The majority of your Infrastructure is on premises and you have a small footprint on AWS.Your company has decided to roll out a new application that is heavily dependent on low latency connectivity to LOAP for authentication Your security policy requires minimal changes to the company's existing application user management processes.What option would you implement to successfully launch this application1?**A.** Create a second LDAP domain on AWS establish a VPN connection to establish a trust relationship between your new and existing domains and use the new domain for authentication**B.** Create a second, independent LOAP server in AWS for your application to use for authentication**C.** Establish a VPN connection between your data center and AWS create a LDAP replica on AWS and configure your application to use the LDAP replica for authentication**D.** Establish a VPN connection so your applications can authenticate against your existing on-premises LDAP

servers
Answer: C
Explanation: Create read replica (RODC) of main LDAP server so that LDAP read replica or RODC can authenticate with application locally. Creating new domain and trust relationship would require a lot of work and changes in existing LDAP configuration so D cannot be answer here.
