Option C**Answer: D****Explanation:** ExplanationYou can analyze network traffic passing through ports or VLANs by using SPAN or RSPAN to send a copy ofthe traffic to another port on the switch or on another switch that has been connected to a network analyzer orother monitoring or security device.Local SPAN supports a SPAN session entirely within one switch; all source ports or source VLANs and destination ports are in the same switch or switch stack.Each local SPAN session or RSPAN destination session must have a destination port (also called a monitoringport) that receives a copy of traffic from the source ports or VLANs and sends the SPAN packets to the user,usually a network analyzer:+ If ingress traffic forwarding is enabled for a network security device, the destination port forwards traffic atLayer 2.Source: http://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst2960/software/release/12-2_55_se/configuration/guide/scg_2960/swspan.html
