So choose us, you will receive unexpected surprise, Like a saying goes: practice makes perfect, by diligent study and the help of Splunk SPLK-2002 : Splunk Enterprise Certified Architect learning materials, you can be successful.

Our SPLK-2002 practice dumps compiled by the most professional experts can offer you with high quality and accuracy practice materials for your success, First, we guarantee the Splunk Enterprise Certified Architect **SPLK-2002 Exam Simulator Fee** test dumps you get are the latest and valid which can ensure you pass with ease.

Rather, it has become necessary in the most challenging [PMP Exam Flashcards](#) scenario of IT enterprises, It is the right time to advance your professional career.

**NEW QUESTION: 1A.** Option AB. Option DC. Option CD. Option B  
**Answer: A**  
**Explanation:** If local DC (domain controller) is not available, DC Locator service will look for another DC in a different site. Note: The following sequence describes how the Locator is able to find a domain controller (see step 3 below) :1 . On the client (the computer locating the domain controller), the Locator is initiated as an RPC to the local Net Logon service. The Locator application programming interface (API) (DsGetDcName) is implemented by the Net Logon service. 2. The client collects the information that is needed to select a domain controller and passes the information to the Net Logon service by using the DsGetDcName API. 3. The Net Logon service on the client uses the collected information to look up a domain controller for the specified domain in one of two ways: For a DNS name, Net Logon queries DNS by using the IP/DNS-compatible Locator - that is, DsGetDcName calls the DnsQuery API to read the Service Resource (SRV) records and A records from DNS, after it appends an appropriate string to the front of the domain name that specifies the SRV record. Etc. Reference: Domain Controller Locator
