NEW QUESTION: 1DRAG DROPYour network contains an Active Directory forest named corp.contoso.com. All servers run Windows Server 2012. The network has a perimeter network that contains servers that are accessed from the Internet by using the contoso.com namespace. The network contains four DNS servers. The servers are configured as shown in the following table. All of the client computers on the perimeter network use Server1 and Server2 for name resolution. You plan to add DNS servers to the corp.contoso.com domain. You need to ensure that the client computers automatically use the additional name servers. The solution must ensure that only computers on the perimeter network can resolve names in the corp.contoso.com domain. Which DNS configuration should you implement on Server1 and Server2? To answer, drag the appropriate DNS configuration to the correct location in the answer area. Each DNS configuration may be used once, more than once, or not at all.
